

Drayton Aerospace acquires ATR72-500 for teardown

Driving growth while fueling the mission of sustainability.

August 2024. Drayton Aerospace has announced the acquisition of an ATR72-500 to drive growth in their aircraft and parts trading business unit.

Drayton will manage the teardown of the aircraft with disassembly scheduled to begin in September 2024, and is expected to drive further growth of its parts trading business and asset management activities within the group as well as in the commercial marketplace.

“While this new asset allows us to realize maximum value in the market as it strengthens our ever-growing parts trading business, it also gives us the opportunity to play our part in sustainability and aircraft end of life solutions” says Steven Pearson CEO of Drayton Composites and Aircraft Trading.

Drayton Aerospace is a multinational Aircraft Maintenance and Aircraft aftermarket service provider. With facilities in ten locations across seven countries. Drayton Aerospace offers a broad spectrum of MRO capabilities including Landing Gear, Engines, Components, Composites and Airframe maintenance solutions.
