

Privacy Policy for NestPeek Baby & Pet Monitor

Last updated: May 31, 2026

NestPeek Baby & Pet Monitor ("NestPeek", "we", "our", or "the app") is a local Wi-Fi baby and pet monitor app.

What the App Does

NestPeek lets you use one device as a camera and another device as a viewer on the same local Wi-Fi network. The app can show live video, optional microphone audio, sound alerts, and talk back between your own devices.

Information the App Uses

Camera: The camera permission is used to capture video on the camera device so it can be viewed from the paired viewer device.

Microphone: The microphone permission is optional and is used for audio monitoring and talk back.

Local network: The app uses your local Wi-Fi network to connect the camera device and viewer device. Monitoring streams are designed to stay between your devices on the same local network.

Advertising: NestPeek may show ads using Google AdMob. Google Mobile Ads SDK may collect or receive information such as device identifiers, advertising identifiers, approximate location, app activity, diagnostics, and ad interaction data according to Google's policies.

Accounts and Cloud Streaming

NestPeek does not require user account creation for monitoring. NestPeek does not provide cloud streaming for the camera or microphone monitor feed.

Data Sharing

Local monitoring video and audio are shared directly between your paired devices on your local Wi-Fi network.

Advertising data may be processed by Google AdMob and its partners to provide and measure ads.

Children's Privacy

NestPeek is intended for use by adults, especially parents, guardians, and pet owners. It is not directed to children.

Safety Notice

NestPeek is a convenience monitoring app. It is not a medical, emergency, or safety device and should not replace responsible supervision, safe sleep practices, or pet care guidance.
