#LBLOD

Government need to spend a lot of time in cleaning their data.

- ø With this project they want to involve all parties. Software developers, Decisions makers, ...
- ø They want the stay as close as possible to the original data.
- ø Now people need to look in the Database and Re-type it into their decision. With linked open data we can link this and make less mistakes.

Demo

Showed the working of the imputation/changing the data + viewing the data.

Challenge

Create useful application on this information of decisions of the government's.

Group Yellow

- Multilevel government dispatching, complain about a problem and it will be send to the right responsible department.

Group Blue

- Pool app, looking for information where parents and schools can find swimming pools in their city + the information of the extra facilities, price, hours,

Group Green

- Service for local business, service that looks to local decision on roads and calculate the economic impact of the decision (works) on the roads
