W1LLDAB3AST - sleeves model

EA Digital Illusions CE - models/textures/sounds
Saint - sounds recorded from BF3

zurf3r - models/textures ripping

xplor3r - compile all/buy pics/normal maps/diffuse edit/scripts edit

Install Notes :

- first make sure ur "custom" folder from "SteamApps\common\Counter-Strike Source\cstrike" is empty, in order for all to function properly this is needed, also is very important do not have any modified scripts, cfg files or autoexec files in "SteamApps\common\Counter-Strike Source\cstrike\cfg" except those that are by default
- after the decompression of the archives, copy and paste the folder "custom" from the folder "# Required" in "SteamApps\common\Counter-Strike Source\cstrike"
- as a bonus copy the content from the folder "custom" from "Bonus Weapons\Weapon 1.4 - Desert Eagle (44 Magnum)" or "Bonus Weapons\Weapon 4.5 & 4.6 - AWP (M98B)" or "Bonus Weapons\Weapon 4.5 - SG 550 (AS VAL)" and in the same way paste it in "SteamApps\common\Counter-Strike Source\cstrike"
- there's also a GUI Script integrated with 4 backgrounds, 4 startup tracks, changed dark menu, bomb led, nightvision, modified hud menu (when u press M)

IMPORTANT :

- all the weapons are working offline/online just great with SteamPipe update, all these have working/visible world models and buy pics and all that and use latest versions of 7-Zip/Power Archiver/Win Rar to decompress
-
