Topic: Improve the workflow when dealing with Bibliographies

[Link to bug report/feature request](#)

- full academic bibliography (move bibliography out of indexes, make database useable, provide easy access, offer options to switch between publication styles etc.) **(moved from topics doc)**

Useful insight (Bibliography) - Moved from [Topics Doc](#)

See what other bibliography managers does, i.e., EndNote or Mendeley. Both provides automatic bibliography formatting of common international journals. Both aren't FLOSS (even though Mendeley uses some part of KDE technologies), but I believe that that shouldn't stop LibO to interact between a bibliography database stored in a user profile, I mean, import databases. ([Francisco Adrián Sánchez](#))

Please see the wiki page for [Referencing Systems in LibreOffice](#). It gives a quite good overview what is available in terms of reference managers for LibreOffice. I would like to particularly highlight Zotero, which is open source and highly usable; it is also widely acknowledged in academia. In my opinion, the LibreOffice team should spend more time on improving key features (such as Table Styles, Picture Styles, Style Sets (all for Writer), and Table Styles, Chart Styles (for Calc). This would be more helpful for academic / professional users.) (Gerry Treppel)
