

Some mobs have stronger stomachs, some have weaker ones. This document lists the different Digestive Strength values of the various digestive organs of mobs. This feature is explained more in-depth in the Mechanics/Player Vore document, but essentially it dictates how strong and efficient a digestive chamber is. A 0 would basically be water, while a 10 would be very strong.

Mobs are listed in each row, vore types and additional specifics are listed in each column. Additionally, for mobs that can't usually vore, the Ravenous status effect (expanded on in items document) is needed to coax them into consuming stuff.

0 cannot digest anything, 32 is maximum strength. Mobs that have fully digested a player or mob will regain some health, in lieu of a hunger bar. Sheep will regrow their wool.
