

#EducatorVoices: Creating With Technology – Jennifer Gonzalez

Jennifer Gonzalez 0:00

It used to be that if we were gonna watch something, that thing was gonna be made by somebody professional. And that was the only way we were gonna ever—and now we all have the ability to make our own videos, edit them, do all kinds of things. The tech gives us the ability to create new things. It allows us to collaborate with people, without the barriers of time and space, basically. It gives us portability. We can do things on the go that we couldn't do. It allows us to publish all kinds of ideas, and words, and art, and all kinds of things. It gives us experiences that we could not have had before, in terms of things that like, AR and VR can give us, virtual field trips that we can go on, people we can have conversations with, famous people that we can have sort of like live interactions with. So, all of these are things that we can do with the technology. And so, if we're not thinking about those things and all of the different possibilities that it has, then we're just missing an opportunity.
