Other notes - The Google Maps Cache file for “Mad Greek” – It is likely this file is created on an Android when a user searches for something like “nearby restaurants, bars, etc.” and results are displayed on the phone. Could this mean BK was in Moscow searching for food? Yes. Could this mean that he was in Washington and searched for food in Moscow? Yes. Regarding the WiFi – the WiFi has the same name as the restaurant – Mad Greek, so it’s difficult to say if that WiFi was shown here or passively detected.
