

Join Us in the Oakhurst Math Challenge Program!

We are excited to announce that our school is participating in the **Math Challenge Program**, a free math enrichment activity designed to spark enthusiasm for problem solving in elementary students. This is for **any and all** students at Oakhurst who want an extra challenge in math!

How it works:

- Bi-weekly math challenges will be shared every other Friday.
- Students have two weeks to work through the problems at their own pace.
- We encourage you to sit down with your child and explore the problems together. It is all about persistence, curiosity, and having fun with numbers!

How you can support your child:

- Let them try the problems independently first, or brainstorm strategies together (like drawing a picture or making a list).
- Focus on the *process* of problem-solving rather than just getting the right answer.

Our first challenge can be found here [Math Challenge #1](#) This challenge is due by next Friday,

If your student needs a printed copy, see Ms. Lockwood.

Students can return completed challenge sheets to the box between Ms. Lockwood and Ms. Hartnett's rooms.

For more details about the program, visit the Math Challenge Program website and go to the [Oakhurst Elementary](#) page. The full schedule is listed on the page, as well as more details about the program.

Thank you for supporting our young mathematicians!
