Office of the Physical Plant and Engineering Services

Classrooms are adequate and conducive to learning.

The Orani Campus remains committed to providing an optimal learning environment for its students, as demonstrated through the adequacy and functionality of its classrooms. Each classroom is equipped with proper ventilation, lighting, and ergonomic seating arrangements to ensure physical comfort and sustained attention during classes. These elements contribute significantly to minimizing distractions and promoting a focused, engaging educational experience.

In addition to the physical infrastructure, the learning spaces are also outfitted with instructional technology such as projectors, whiteboards, and reliable internet access, enhancing both teaching delivery and student interaction. Faculty members report that the availability of these tools supports diverse teaching methodologies, including multimedia presentations, group discussions, and interactive learning activities. As a result, students are able to better grasp complex concepts and participate actively in class sessions.

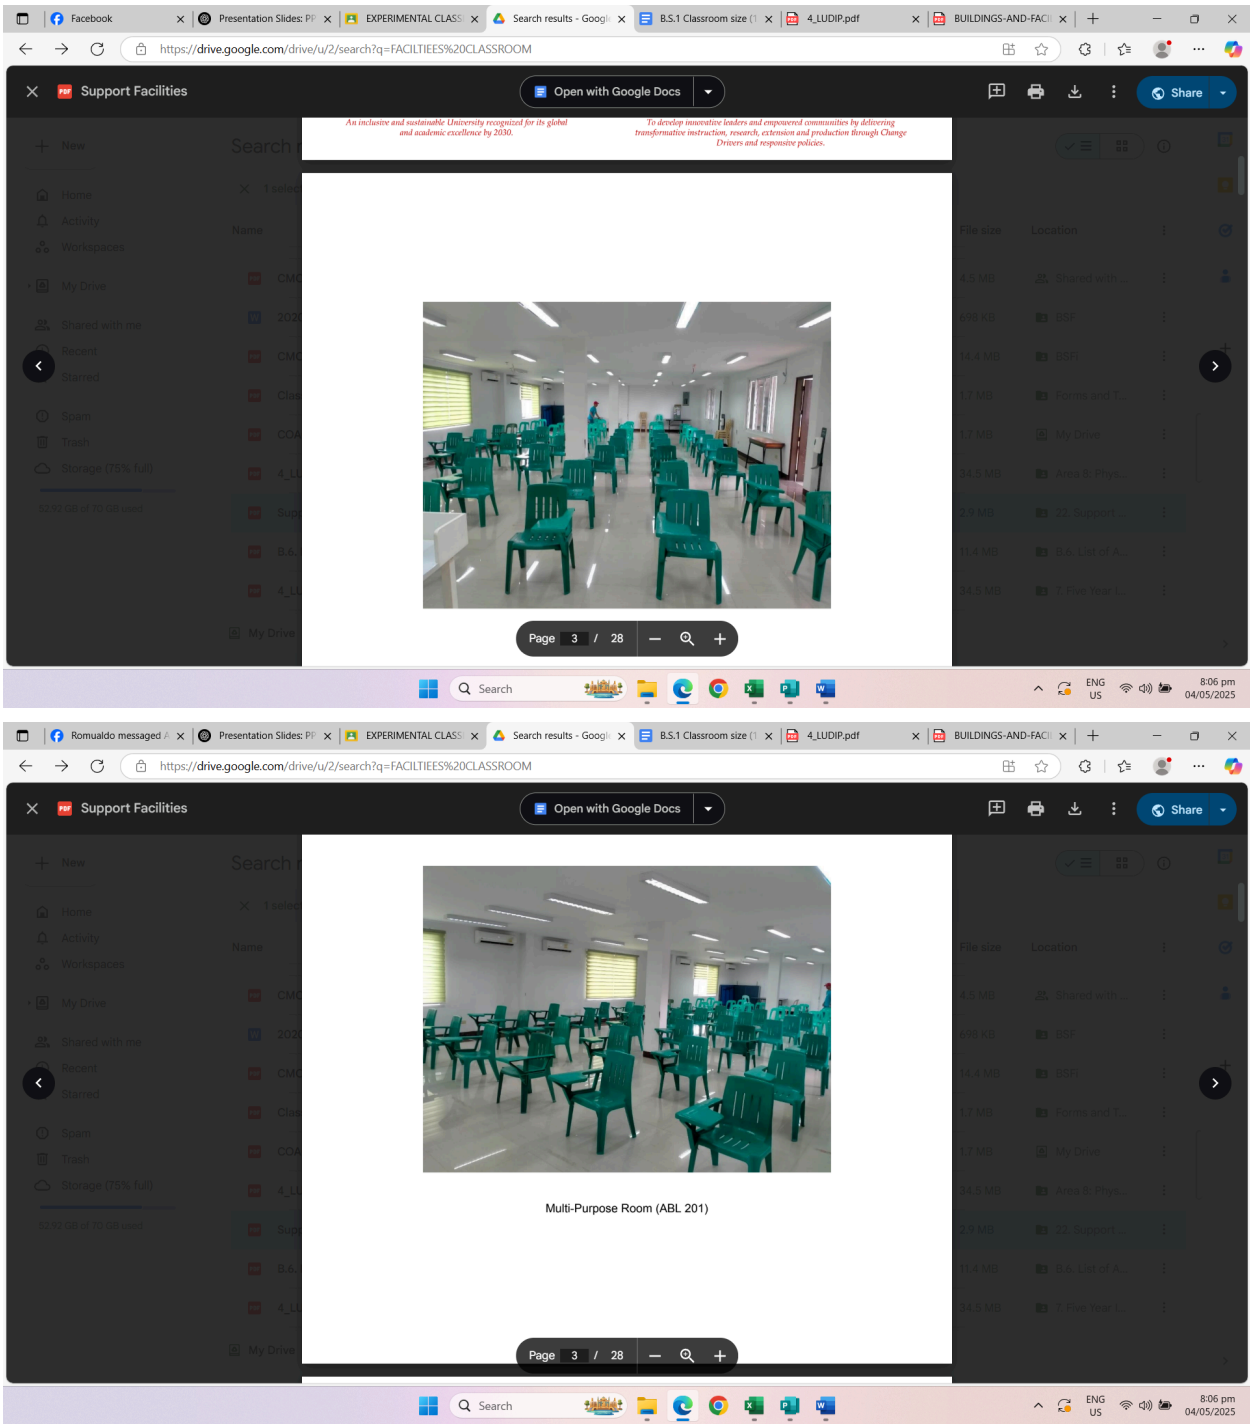

Regular assessments and feedback mechanisms are implemented to ensure that classroom conditions are continuously improved. Maintenance staff and academic administrators work collaboratively to identify and address any facility-related concerns promptly. This commitment to maintaining high standards in learning environments reflects the campus’s broader goal of ensuring academic excellence and student success.
