

Objective: Using a minimum of a 125 toothpicks and minimal hot glue, **create an interesting sculpture** (realistic or abstract) that can hold a one pound brick (you are asked not to try the brick at any point during construction until you get to class and we photograph your sculpture- if your structure collapses you will not be graded down). Try your best to create a solid sound structure that is interesting to the eye

Things to think about:

Where will my brick rest? (It cannot touch the ground, and must be supported by your structure)

Do I want the brick to lay down or stand up for the test?

How am I going to make my structure look interesting?

Will my structure be a solid piece? (You can have multiple pieces glued or fastened to a board/cardboard)

Inspirational Toothpick Artists:

Steven J Backman

Scott Weaver

Bob Morehead

This project is not worth any points, but will help you get a head start on your AP portfolio.
