

Slot machine check process is planned in the Netherlands

The Dutch Gambling Authority (KSA) announced the testing process for slot machines in October and November 2021. The regulator will also ensure that operators comply with the new registration requirements. Starting April 1, 2021, slot machines in the Netherlands are required to register and inform what can happen through gambling. If a customer determines that there is a problem with gambling behavior, the operator should report the number of such users. [경마사이트](#)

And on October 1, 2021, a new responsibility emerged. We are also checking the frequency of visits to slot machine businesses.

The main purpose of new obligations to operators is to control gambling addiction situations. The analysis of gamblers' behavior is an important aspect of regulation, and the basis of the new rule is the Remote Gambling Act (KOA), which takes effect on April 1, 2021.

The law legalizes the online gambling market in the country, but as a new opportunity, new responsibilities have come. Providers should adopt new rules to prevent frequent cases of gambling addiction.
