

- [Hail Mary](#)
 - Best Science fiction I have ever read
- [Man's Search For Meaning](#)
 - Very fulfilling read - also this have so many situations which makes all of our problems look very first world problems
- [The Beginning of Infinity](#)
 - Only book in list here which I haven't finished and I would still recommended it strongly. I am reading this since a year now I think. A book which is worth reading and worth reading slow.
- [Algorithms to Live By](#)
 - I would recommend this to all the computer science folks - fun real life situation examples/usage of theoretical algorithm we read
- [Seven Brief Lessons on Physics](#)
 - Super thin book - Must read if you're a physics noob and scared of the word itself (like most people)
- [The Psychology of Money](#)
 - Personal finance behaviour related book, super unique and interesting ideas related to how people handle money
- [The Almanack of Naval Ravikant](#)
 - Just doesn't feel right to not add this, book to get thoughts about what to think, what could be useful to think
- [Let's Talk Money](#)
 - Good book to read - if you're starting from scratch on personal finance
