

## **CONNECTING UNIVERSE STUDIES WITH ARTS, LITERATURE AND TECHNOLOGY (AI)**

### **Story telling:**

#### ***Voyage of universe (Universe from my eyes):***

I want to travel in the stars but my miserable body is holding me back

I know one day my soul will get freed from this cage i.e body, I know one day when the trials will be over and the cosmos will absorb my existence I'll get eternal peace, that day i will travel along the universe like a shooting star.

Andromeda will be waiting for me, my law of attraction would attract me towards the Orion Nebula the seven sisters would be excited to see me and waited long enough for me now they are expecting me i hope i might not get late in their galaxy maybe i have to use a wormhole, I'll pay visit to quasars to feel the warmth of their energy there would comes a time in this curiosity voyage when this wanderlust will get to aware of the fact that universe is expanding and no matter how hard he try he'll never get complete this adventure then he'll stop and will become a twinkling star in the night sky who might inspire someone to dream the way one made him dream back then and brought him here and keep on inspiring and manipulating the demons of earth until his fuel burns him out and he'll turn into a black hole.

to be continued.

Hoping that some other advanced intelligent beings from some other galaxy will one day take me in their moments of entertainment and would show this vast and expanding space to me.

This is just my dream which I am sharing with you all, what's your astronomy related dream?

### **Poetic Definitions:**

- **Black hole:**

" O gravity thy pulled things around you...

Neither thoughts nor light escaped beyond you"

- ***Andromeda:***

"Thy spiral so blue

Nearest galaxy you grew

Visible will you flow

Forever you shall glow"

- ***Orion Nebula:***

"Contains clouds and gasses it, many

occurs in years it, many

Lives far by Earth it, many

Gives birth to shiny stars it, many"
