

How to Learn Linux, Networks, and Scripting in Bash & Python

This practical, in-depth guide book starts with the essentials of Linux for hackers and expands into some basic BASH and Python scripting, with hacking exercises and challenges.

—WHO IS THIS BOOK FOR

This book is only for those who are truly committed to becoming a hacker or a pentester

If you are serious about learning Linux to become a hacker or a pentester, then I have good news.

Instead of wasting 12 hours on tedious YouTube tutorials that don't teach you even 10% of the practical side of Linux for hacking, meant just confuse you.

Or paying \$400 for courses, filled with typos, errors, and impractical exercises that keep you from actually becoming a professional hacker,

Because of which, you end up thinking you aren't smart enough to learn Linux, whereas you would've already learned Linux and started hacking machines,

If you had learned from the **SCRIPT KIDDY TO HACKER SYSTEM** designed to turn anyone who is actually committed about pentesting into a *real hacker*.

The Secrets of a Hacker ebook follows this exact system, where:

- We learn through a set of bite-sized lessons on Linux, networks, and scripting(...which are the hacking superset), explained from the core basics in plain English.
- On each topic you get real-world pentesting exercises and challenges explained for complete beginners to guarantee you understand them.
- Plus you have access to an exclusive community of hackers who have proven this system's effectiveness countless times and will help you avoid the mistakes they did.

You can now get my book and all the bonuses it comes with at a 90% discount only till Mach 1st 2024 and become an actual hacker... or not, and stay a script kiddy forever.

—BOOK DETAILS

With the **SCRIPT KIDDY TO HACKER SYSTEM** you not only get the ebook but also:

“If you’re not using Linux, you’re not a hacker.” – Linus Torvalds

- Daily checklist and roadmap, that will *2x your progress*(...with the exact steps you should take) (Valued at \$30)
- The single in-depth Bash & Linux cheat sheet that’ll skyrocket your skills (Valued at \$42)
