

Shamans, this is an example of a nice easy-to-use multibind for raid healing . all you have to do is press one button, and you'll keep casting your gift and squall and then single target whatever tank you have targeted.

The spells in the picture are Gift, Squall. The last three reckless heals the problem on Aaryonar is that we are often out of line of sight(LOS), and gift and squall both require it, so this will not work if you don't have Los to fix this

Hover over outside the buttons to find out what Hotbar you are on

Alt+ o to open options 4th tab over is keys drop-down menu to the Hotbar you are using then set your keys like this, feel free to use different buttons that work better for you.

This makes an alternate hotkey that is just your single target heals helps avoid Los issues or just when you need to not nuke something with gift.
