

NEUTRON

Permissionless
Launch on your terms, get your smart contracts to market in a blaze

IBC + ICQ + ICA
Smart contracts can query, transact and manage accounts in remote zones directly from Neutron

Interchain Security
Secured by 190M+ staked ATOM, Neutron is the most secure CosmWasm platform

CosmWasm
Powered by Tendermint, interoperable by default, secure smart-contracts

Smart Contract platform secured by Cosmos Hub

Andrey Kuznetsov
Co-Founder

Andrey is a serial entrepreneur and engineer focused on fintech, cybersecurity, and network development. He has led teams that have built payment services, corporate messengers, blockchain staking services, and crypto portfolio analytics tools

Alex Malkov
Co-Founder

5+ years of legal consulting for leading blockchain and fintech platforms. Alex has advised AAVE, Bequant, Scalable Solutions, Nebula and others.

Hussein Mohammed AlMeeza, Co-Founder

Hussein Mohammed Al Meeza is an acclaimed award-winning banker with over 45 years of experience spanning the Islamic banking, finance and insurance sectors. A founding member of Emaar properties.

Mohammed AlKaff AlHashmi, Co-Founder

Mohammed AlKaff AlHashmi is a computer science engineer with more than 18 years of experience. With this accumulative experience he focuses on Industry 4.0, Artificial Intelligence, machine learning, Industrial automation, and IOTs.

Infrastructure Powering Modern Capital Markets

Sei is the first sector-specific Layer 1 blockchain, specialized for trading to give exchanges an unfair advantage

Decentralized NASDAQ

- Specialized for Exchanges**
Sei gives exchanges the upper hand with the native order matching engine, frontrunning protection, and multiple levels of order bundling.
- Security-First**
Secured by some of the largest institutions in the world, Sei is built from the ground up to prioritize security above all else.
- Unparalleled speed**
The fastest chain to finality on the market today at 600ms. All with low transaction costs and industry-leading throughput.

Who's Building on Sei?

**Buy and sell crypto, quickly and safely,
without giving up custody of your assets**

zk.Link zkSync STARKWARE

Complex experiences
Multi-chain trading is too complicated - there is no simple and accessible order book platform to securely trade on multiple chains

Risky workarounds
Multi-chain traders are forced to use unstable cross-chain bridges and wrapped tokens to go from chain to chain.

Unpredictable trading
Impermanent loss, poor capital efficiency, high slippage fees, and sandwich attacks from arbitrage bots are unmanageable on AMMs.

secret

We made smart contracts private

Stay safe while spending, saving, and trading

Take full control of your creativity

Explore and expand the frontiers of Web3

Ultimate security & transparency

Fully auditable

All Cellar Smart Contracts have undergone extensive internal reviews by our highly sophisticated solidity engineers in addition to multiple external security audits. Sommelier Cellar Contracts are fully auditable by anyone.

Decentralized

Transactions are managed by the Sommelier validator set with decentralized governance. Cellars can only move assets among the prescribed positions and only users can remove their funds.

Non-custodial

We are a non-custodial protocol. Money is stored directly on Ethereum smart contracts and deposited to AAVE. Users have the peace of mind that they can always remove their funds, no matter the state of the Sommelier protocol.

Safe bridge

Our Ethereum bridge is used only to pass strategy instructions. No actual funds are flowing between Cosmos and Ethereum. Optimize my yield
