Ways to Practice Multiplication Facts

1. **Math War**

Here's how to play:

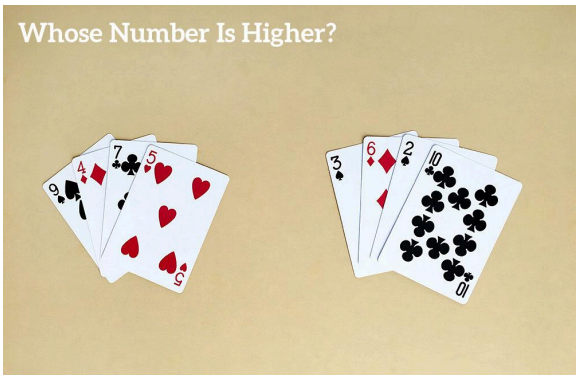

- Remove jokers, face cards, and aces from the deck. Split the deck evenly between two players. Make sure the cards are face down.
- Both players turn over the top card in their pile at the same time. Whoever yells out the complete math fact first wins the cards. (Example: If the players turn over a 4 and a 6, whoever says "4 times 6 equals 24" first takes the cards.)
- The player who manages to get all of the cards is the winner.

2. **MULTIPLICATION – DOMINOES GAME**

Materials: set of dominoes, plain paper, pencil, partner to help check your work.
Directions:
Pick a domino
Draw the domino
Write the equation

3. **Whose Number is Higher?**

Here are the rules for this two-player game:

- First, decide on how many rounds you want to play. Then remove jokers, face cards, and aces from the deck. Deal out four cards to each player.
- The player who can make the highest product (for multiplication games) wins the round.
- Whoever wins the most rounds wins the game.

4. Multiplication Flash Cards
