Abstract (11pt, bold)

The abstract must fully follow the pattern of this paragraph and must stand alone, meaning that no citations are attached. It must, in addition, provide concise information to the reader regarding the purpose, method, and findings. The nature of abstract should be non-technical but it is clear enough for the reader to understand the essence of the text. The abstract must be typed in one paragraph consisting of 100-200 words. (11pt, italic, 1 paragraph, 1 space).

Keywords: *politics, social, government, policy (11pt, italic)*

The keywords will be used for indexing purposes. Keywords should not be more than five words or phrases. Keywords must also be separated by commas (,).

Introductory Section

This section must contain background, research questions and main assumptions or hypotheses. A review of the literature and research methods can be included in this section.

The purpose of literature review is to "look again" (re + view) at what other researchers have done about the topic discussed (Leedy & Ormrod 2005: 70). A good literature review should not just be a summary. In this case, the author is expected to critically evaluate and synthesize the work of others.

For the methods, the authors can mention the method used to analyze, for example, by mentioning the field research or library research methods. The kinds of data that will be used as analysis material can also be mentioned in this part. The method(s) allows the reader to evaluate the suitability and validity of research / analytical results.

Discussion / Research Results Section

The research results or discussion section contains the findings of the research and further discussion. This section can be divided into several subtitles/parts. This section should be written with additional support from adequate data. The results and findings of the study must be able to provide answers or explanations to the questions stated in the introduction.

Concluding Section

Conclusions or concluding statements are expected not to merely be a repeat of the research results. The conclusion must contain a summary of the analysis by referring to the hypothesis or the purpose of the study in accordance with the findings that have been obtained. If necessary, the author is welcome to explain the suggestions that present things for prospective and further research.

References/Bibliography

All references cited in the article text must be written in this section in [APA](#) style. The bibliography is expected to include references obtained from primary sources (consisting of scientific journals amounting to 80% of all bibliographies) that have been published in the last 10 (ten) years. The remaining 20% can include research articles or research reports (theses, books and other relevant publications). The bibliography only mentions references that have been referenced or mentioned in the text. We recommend authors to use bibliographic software such as Zotero.

To get the example, please consult published articles on our website to see how the articles should be written.
