The events at the international political scene, in the last few years, confirm that the concept of remote control of human brain is a matter of negotiations. In January 1999 the European Parliament passed a resolution where it calls for an international convention introducing a global ban on all developments and deployments of weapons which might enable any form of manipulation of human beings."

That it is feasible to manipulate human behavior with the use of subliminal, either sound or visual, messages is now kogenerally known. This is why in most of the countries the use of such technologies, without consent of the user, is banned. Devices using light for the stimulation of the brain show another way how the light flashing in certain frequencies could be used for the manipulation of human psychic life. As for the sound, a report on the device transmitting a beam of sound waves, which can hear only persons at whom the beam of sound waves is targeted, appeared last year in the world newspapers. The beam is formed by a combination of sound and ultrasound waves which causes that a person targeted by this beam hears the sound inside of his head. Such a perception could easily convince the human being that it is mentally ill. The acts presentedju78 in this article suggest that with the development of technology and knowledge of the functioning of human brain new ways of manipulation of human mind keep emerging. One of them seems to be the electromagnetic energy.

Brain link Tehnology

NSA SIGINT can remotely detect, identify and monitor a person's bioelectric fields. The NSA's Signals Intelligence has the proprietary ability to monitor remotely and non-invasively information in the human brain by digitally decoding the evoked potentials in the 30-50 Hz, 5 milliwatt electromagnetic emissions from the brain.

Neuronal activity in the brain creates a shifting electrical pattern that has a shifting magnetic flux. This magnetic flux puts out a constant 30-50 Hz, 5 milliwatt electromagnetic (EMF) wave. Contained in the electromagnetic emission from the brain are spikes and patterns called "evoked potentials". Every thought, reaction, motor command, auditory event and visual image in the brain has a corresponding "evoked potential" or set of "evoked potentials". The EMF emission from the brain can be decoded into the current thoughts, images and sounds in the subject's brain.

EMF Brain Stimulation works by sending a complexly coded and pulsed electromagnetic signal to trigger evoked potentials (events) in the brain, thereby forming sound and visual images in the brain's neural circuits. EMF Brain Stimulation can also change a person's brain-states and affect motor control.

NSA - TECHNIQUES AND RESOURCES

Remote monitoring/tracking of individuals in any location, inside any building, continuously, anywhere in the country. A system for inexpensive implementation of these operations allows for thousands of persons in every community to be spied on constantly by the NSA.

REMOTE RNM DEVICES

NSA's RNM equipment remotely reads the evoked potentials (EEGs) of the human brain for tracking individuals, and can send messages through the nervous systems to affect their performance. RNM can electronically identify individuals and track them anywhere. This equipment is on a network and is used for domestic intelligence operations, government security and military base security, and in case of bioelectric warfare.

Detecting EMF Fields in Humans for Surveillance

A subject's bioelectric field can be remotely detected, so subjects can be monitored anywhere they are. With special EMF equipment NSA cryptologists can remotely read evoked potentials (from EEGs). These can be decoded into a person's brain-states and thoughts. The subject is then perfectly monitored from a distance. NSA personnel can dial up any individual in the country on the Signals Intelligence EMF scanning network and the NSA's computers will then pinpoint and track that person 24 hours a day. The NSA can pick out and track anyone.

Mind control - The internet?

The NSA keeps track of all PCs and other computers sold. This is an integral part of the Domestic intelligence network. The NSA's EMF equipment can tune in RF emissions from personal computer circuit boards (while filtering out emissions from monitors and power supplies). The RF emission from PC circuit boards contains digital information on the PC. Coded RF waves from the NSA's equipment can resonate PC circuits and change data in the PCs. Thus, the NSA can gain wireless modem-(?) entry into any computer in the country for surveillance or anti-terrorist electronic warfare.

Domestic Surveillance and Mind Control Technology?

A CARELESS mistake by Microsoft programmers has revealed that special access codes prepared by the US National Security Agency have been secretly built into Windows. The NSA access system is built into every version of the Windows operating system now in use, except early releases of Windows 95 (and its predecessors). The discovery comes close on the heels of the revelations earlier this year that another US software giant, Lotus, had built an NSA "help information" trapdoor into its Notes system, and that security functions on other software systems had been deliberately crippled.

3D- What is remote sensing?

If you have heard the term "remote sensing" before you may have asked, "what does it mean?" It's a rather simple, familiar activity that we all do as a matter of daily life, but that

gets complicated when we increase the scale. As you view the screen of your computer monitor, you are actively engaged in remote sensing.

A physical quantity (light) emanates from that screen, which is a source of radiation. The radiated light passes over a distance, and thus is "remote" to some extent, until it encounters and is captured by a sensor (your eyes).

Each eye sends a signal to a processor (your brain) which records the data and interprets this into information. Several of the human senses gather their awareness of the external world almost entirely by perceiving a variety of signals, either emitted or reflected, actively or passively, from objects that transmit this information in waves or pulses. Thus, one hears disturbances in the atmosphere carried as sound waves, experiences sensations such as heat (either through direct contact or as radiant energy), reacts to chemical signals from food through taste and smell, is cognizant of certain material properties such as roughness through touch, and recognizes shapes, colors, and relative positions of exterior objects and classes of materials by means of seeing visible light issuing from them. In the previous sentence, all sensations that are not received through direct contact are remotely sensed.

MIND CONTROL

9. September 2008 - DEB CHAKRABORTY

The term "Mind control" basically means covert attempts to influence the thoughts and behavior of human beings against their will (or without their knowledge), particularly when surveillance of an individual is used as an integral part of such influencing and the term "Psychotronic Torture" comes from psycho (of psychological) and electronic. This is actually a very sophisticated form of remote technological torture that slowly invalidates and incapacitates a person. These invisible and non-traceable technological assaults on human beings are done in order to destroy someone psychologically and physiologically.

Actually, as per scientific resources, the human body, much like a computer, contains myriad data processors. They include, but are not limited to, the chemical-electrical activity of the brain, heart, and peripheral nervous system, the signals sent from the cortex region of the brain to other parts of our body, the tiny hair cells in the inner ear that process auditory signals, and the light-sensitive retina and cornea of the eye that process visual activity.[2] We are on the threshold of an era in which these data processors of the human body may be manipulated or debilitated.

Definition of psychotronic (psycho-physical) weapons

Psychotronic Weapons (PF- weapons) this is the totality of all possible methods and means (techno-genic, suggestive, pharmacological, paranormal, complexes, and others) of hidden, forced influences on the psyche of a person for the purpose of modifying his consciousness, behavior and health for what is desired in the way of influencing aspects of control..." This is not only dangerous, this is deadly!"

The first phase is the harassment program: They use Echelon, Tempest, microchips, implants, see through wall radar, obtain informants, neighbors, and co-conspirators to

harass, discredit, and harm an individual. Victims lose their families, jobs, homes, and cars. Ultimate goal to destroy a person's life which will isolate them from family, friends. The isolation is needed to have access to the person to conduct many of the experiments on them.

The second phase is the assaults of Directed Energy Weapons. After a victim becomes isolated from everyone in the world. The victim now having feelings of regret, remorse, of loss, trauma, and are drained and broken emotionally and physically. During this time many have been implanted with microchips. Many begin experiencing extreme pain to their head. Some hear voices. Then pain is delivered to various other parts of their bodies. The pain is delivered by Directed Energy Weapons.

Directed Energy Weapons. Some of the weapons were known as non-lethal weapons. They use such weapons as extremely low frequency ELF electromagnetic weapons (which has been used in mind control), acoustics, harmonics (which have been used as a mind control technique), ultrasound, microwave audiograms, microwave pulsed, and radio frequency. Another electromagnetic energy beam can be used to induce "considerable agitation and muscular activity" or "induce muscular weakness and lethargy" this weapon is known as Ultra High Frequency EM. Psychological warfare tactics are being used against unsuspecting citizens to destroy their jobs, their families and their lives. The perpetrators will stop at nothing. Their objective is to utterly destroy a person, very often resulting in a person taking his or her own life, or ending up in a mental hospital. This has been taking place for years and nothing is ever said about it. Nothing is ever written about it.

Some people also experience electronic harassment. This is extremely distressing, painful and invasive, and feels like one's mind and body is undergoing constant rape, 24 hours a day, 7 days a week. The technology used to do this is unknown, but hundreds of victims report the same physical sensations and experiences. Many take their lives in an attempt to escape the horror.

The technology involves the use of electromagnetic waves of various frequencies to achieve different results. Some frequencies will make a person tired, while others may cause confusion or memory loss. "Electronic harassment" or e-harassment is a catch-all term used to describe a group of circumstances which a large number of people are currently experiencing in common.

Polaris tracking used in MRI Brain Mapping

The TMS lab at the Ahmanson-Lovelace Brain Mapping Center is equipped with a Cadwell high-speed magnetic stimulator that generates 2.2 Tesla of maximal stimulation. Stimulation is delivered through three coils of different shapes. We have a standard circular coil, an eight-shaped coil that allows a more precise stimulation of specific sites of the cerebral cortex, and an angled coil that allows a deeper stimulation than the previous two coils. The lab is also equipped with two Magstim Model 220 units, a Blocking module and a Bistim module, allowing paired-pulse TMS at short (1 ms) and long intervals, two double 70 mm coils and one water-cooled coil. The lab is also equipped for frameless stereotaxy composed of an infrared-based tracking system and associated software. The tracking system is a Polaris Passive Tracking System, composed of a camera and tracking tools. The software BrainSight allows registration and online monitoring of the subject's head position with his/her structural brain image and tracking the position of the coil with respect to the underlying brain structures.
