NURSE GRADE II(HOMEO),HOMEOPATHY

EXAM DATE:04-03-2016

1.The greatest danger of hyperkalemia is:

- A.Tetany
- B.Fluid overload
- C.Cardiac arrest*
- D.Polyuria

Ans:C

2.Which statement is false regarding Japanese encephalitis?

- A.It is bacterial encephalitis
- B.It is transmitted by Culicine mosquito
- C.It is a mosquito-borne encephalitis*
- D.It is caused by flavi virus

Ans:C

3.While caring a patient after pneumonectomy,which is the most applicable one?

- A.Accumulation of fluid in the empty thorax is a desired outcome*
- B.Two chest drainage tubes should be attached to water seal drainage and low suction
- C.Patient should be kept in his back only
- D.Patient should be discouraged from coughing

Ans:A

4.Actions which halts the progress of a disease at its initial stage,management and prevention of complication is termed as:

- A.Primary prevention

THANKS FOR YOUR SUPPORT.VISIT WWW.WISHYOUONLINE.BLOGSPOT.COM

B.Secondary prevention*

C.Tertiary prevention

D.Rehabilitation

Ans:B

5.Constant presence of an infectious agent or disease within a given geographic area is called:

A.Epidemic

B.Pandemic

C.Sporadic

D.Endemic*

Ans:D

6.While caring a new born baby with high bilirubin,with signs of impending kernicterus,nurses primary observation should be for:

A.Lethargy and loss of moro reflex*

B.Cyanosis and respiratory distress

C.Rapid pulse and Diaphoresis

D.Vomiting and diarrhea

Ans:A

7.Which of the following symptoms are expected in complete heart block?

A.Hypertension,HR-60/mt,increased pulse pressure

B.Hypotension,HR-100/mt,chest pain

C.Syncope,hypotension and ventricular rate of 40/mt*

D.Hypertension,convulsion,HR-100/mt

C.Constipation

D.Polyuria

Ans:A

12.The most prominent features in Catatonic-Schizophrenia are:

A.Delusion

B.Motor and volitional disturbance*

C.Hallucination

D.Silly giggling

Ans:B

13.Highly malignant,rapidly growing tomour of cerebellum seen in children is:

A.Astrocytoma

B.Meningioma

C.Medullo blastoma*

D.Ependymoma

Ans:C

14.National Mental Health policy was formulated in the year:

A.1982*

B.1987

C.1985

D.1912

Ans:A

15.Primary goal in the nursing management of cervical spine injury will be:

THANKS FOR YOUR SUPPORT.VISIT WWW.WISHYOUONLINE.BLOGSPOT.COM

- A.Prevention of spinal shock
- B.Reorientation to reality
- C.Pain relief
- D.Maintenance of respiration*

Ans:D

16.Which one of the following can precipitate an acute gouty arthritis?

- A.Emotional stress
- B.Lack of exercise
- C.Excess alcohol intake*
- D.Excess smoking

Ans:C

17.The route of administration of Schick test is:

- A.Intramuscular
- B.Oral
- C.Intradermal*
- D.Subcutaneous

Ans:C

18.Which of the following symptom after Abdominal-aortic aneurysm indicate retroperitoneal-haemorrhage?

- A.Complaint of severe back pain*
- B.Absence of peristaltic sounds
- C.Air bubbles in the Nasogastric drainage
- D.Chest discomfort

Ans:A

D.After 5 days

Ans:C

23.Symptomatic hyponatremia is managed by IV administration of:

A.Dextrose saline

B.3% solution of NaCl*

C.Ringer lactate

D.Normal saline

Ans:B

24.Which vitamin deficiency is common in association with INH therapy in tuberculosis?

A.Riboflavin

B.Thiamin

C.Niacin

D.Pyridoxin*

Ans:D

25.Which of the following is not a vaccine preventable disease?

A.Meningo coccal meningitis

B.Rheumatic fever*

C.Rotavirus diarrhea

D.Japanese encephalitis

Ans:B

26.Among the following congenitat heart disease,which one is Cyanotic?

A.Truncus arteriosus*

THANKS FOR YOUR SUPPORT.VISIT WWW.WISHYOUONLINE.BLOGSPOT.COM

B.Atrial septal defect

C.Ventricular septal defect

D.Atrio ventricular canal

Ans:A

27.'Flag sign' is a non specific,but usual feature in:

A.Scurvy

B.Kwashiorkor*

C.Marasmus

D.Pellagra

Ans:B

28.Vagolytic agents are given before general anaesthesia in major surgery .Most commonly used vagolytic agent is:

A.Atropen sulphate*

B.Morphine sulphate

C.Calcium gluconate

D.Sodium bicarbonate

Ans:A

29.Normal CSF pressure is:

A.20-40 mm of H₂O

B.20-40 mm of Hg

C.200-240 mm of H₂O

D.80-180 mm of H₂O*

Ans:D

D.Encephalopathy

Ans:A

34.Central venous pressure is a measurement of pressure within the:

A.Aorta

B.Superior vena cava*

C.Pulmonary artery

D.Pulmonary veins

Ans:B

35.Excess growth hormone in adults result in:

A.Cushing's syndrome

B.Gigantism

C.Dwarfism

D.Acromegaly*

Ans:D

36.A patient is admitted with respiratory distress and diagnosed as having Pneumothorax.Here immediate priority should be:

A.Tracheostomy

B.Bronchoscopy

C.Throat suction

D.Insertion of chest tube*

Ans:D

37.Which of the following observation indicates Cardiac tamponade?

A.Marked decrease in chest tube drainage*

THANKS FOR YOUR SUPPORT.VISIT WWW.WISHYOUONLINE.BLOGSPOT.COM

B.Sudden increase in arterial blood pressure

C.Widening of pulse pressure

D.Sudden decrease in CVP

Ans:A

38.Most common cause of aphasia is vascular disease of brain.Major blood vessel that is associated with aphasia is:

A.Middle meningeal artery

B.Middle cerebral artery*

C.Facial artery

D.Temporal artery

Ans:B

39.Unpleasant and conflict producing emotions and desires are unconsciously forgotten by an ego defence called:

A.Suppression

B.Regression

C.Repression*

D.Denial

Ans:C

40.The most common initial symptoms of SLE are:

A.Tremors and loss of weight

B.Painful,inflamed joints with stiffness*

C.Petechiae in skin and pallor

D.Increased BP,Haematuria and Oedema

C.24-36 hrs*

D.18 hrs

Ans:C

45.The volume of air that can be made to pass into and out of the lungs by the most forcible inspiration and expiration is:

A.Vital capacity*

B.Tidal volume

C.Inspiratory reserve volume

D.Expiration

Ans:A

46.In which position the client will be placed for rectal examination?

A.Supine

B.Lithotomy

C.Prone position

D.Sim's position*

Ans:D

47.The most accurate indication of true labour is:

A.Rupture of membrane

B.Progressive cervical dilation*

C.Vaginal bleeding

D.Diaphoresis

Ans:B

THANKS FOR YOUR SUPPORT.VISIT WWW.WISHYOUONLINE.BLOGSPOT.COM

48.An infant with bronchiolitis is receiving oxygen through oxygen tent.Which is the most accurate method of taking body temperature for him?

- A.Rectal thermometer*
- B.Axillary thermometer
- C.Skin heat sensor
- D.Oral thermometer

Ans:A

49.Nausea and vomiting during first trimester of pregnancy is an adaptation to the increased levels of:

- A.Leutinisig hormone
- B.Progesterone
- C.Oestrogen
- D.Chorionic gonadotropin*

Ans:D

50.The term cataplexy denotes:

- A.Immobile position that is constantly maintained
- B.Rigidity associated with catatonic states
- C.Temporary loss of muscle tone*
- D.Catatonic symptom with rigid odd posture

Ans:C

51.In which position,the nurse will keep herself while palpating a patient's neck with lymphadenopathy?

- A.Patient's right side

THANKS FOR YOUR SUPPORT.VISIT WWW.WISHYOUONLINE.BLOGSPOT.COM

- B.Patient's left side
- C.In front of the patient
- D.At patient's back*

Ans:D

52.The outermost membrane that helps in formation of placenta is

- A.Amnion
- B.Chorion*
- C.Funis
- D.Yolk sac

Ans:B

53.Nurse's primary observation in a diabetic child admitted with ketoacidosis would be:

- A.Hyperpnoea*
- B.Brady cardia
- C.Hypertension
- D.Brady pnoea

Ans:A

54.Predisposing factors of aphthous ulcer include all the following except:

- A.Stress
- B.Vitamin deficiency
- C.Smoking*
- D.Viral infection

Ans:C

55.Which of the following symptoms are characteristic of endometriosis?

- A.Pelvic inflammation
- B.Osteoporosis
- C.Amenorrhoea
- D.Painful menstruation and backache*

Ans:D

56.The basic emotional task for preschooler is:

- A.Trust
- B.Initiative*
- C.Industry
- D.Independence

Ans:B

57.Cloudy CSF obtained in lumber puncture is an indication of:

- A.Increased WBC count*
- B.Increased glucose level
- C.Increased RBCs
- D.Normal CSF

Ans:A

58.The opening between Vocal Cords in the larynx is:

- A.Epiglottis
- B.Cricoid cartilage
- C.Glottis*

THANKS FOR YOUR SUPPORT.VISIT WWW.WISHYOUONLINE.BLOGSPOT.COM

D.Thyroid cartilage

Ans:C

59.While collecting nursing history,a patient complaints of ‘floaters’ in visual field.Which condition the nurse should suspect?

A.Cataract

B.Glaucoma

C.Retinal detachment*

D.Meibomian cyst

Ans:C

60.Among the foetal blood vessels,highest oxygen content is seen in:

A.Umbilical artery

B.Ductus arteriosus

C.Pulmonary artery

D.Ductus venosus*

Ans:D

61.The part of brain concerned with hungers thirst is:

A.Thalamus

B.Hypothalamus*

C.Broca’s area

D.Internal capsule
