Abstract (300 words)

This Article aimed to study (1) .....(2)..... ..... 3)..... the instrument for collecting data was ..... Analysis data by Descriptive statistics and Content Analysis. The research results were found as follows;

1.....
.....
.....
.....

2.....
.....
.....
.....

3.....
.....
.....
.....

Keywords: ……..; .....; .....; …… **(not less than FIVE words)**

Introduction (1-2 pages)

First paragraph

In the first paragraph, describe what your research is about, why it is important, and what problems or issues it will focus on. You should talk about what has already been studied in this area by using information from research papers (especially those published in

the last 1–5 years), reports from government agencies, or important theories. Summarize briefly what has already been found and mention which researcher or study discovered it. This helps show what we already know and what is still missing (the research gap). By doing this, you show why your study is needed and how it can contribute new knowledge.

Second paragraph

In the second paragraph, explain more clearly the area of research or the specific problem you want to study. Tell who or what group this research focuses on and describe their main characteristics or needs. You can also mention any past experiences or expertise you have in this area, or if there have been previous studies related to this topic. State clearly who the target group or audience is for this study. This helps readers understand the context and why this research is important to that group.

Third paragraph

In the third paragraph, write a short summary of the objectives or goals of your research. These objectives act as a guide or "compass" for your whole study. You should clearly state **what** you plan to do, **how** you will do it, **where**, and **when**.

Finally, add a sentence like this:

This research paper presents ***[your topic or content]***, describing its structure and the main points discussed. The paper aims to provide new knowledge or solutions that can benefit the academic community or society as a whole.

Research Objectives

In relation to the problem statement above, the main objectives of the research are to find out:

1. .....
2. .....
3. .....

Literature Review (2-3 pages)

The authors should explain what other people have already found in **documents, articles, and research papers.** This will help show what **important points or questions are still missing** (this is called the "knowledge gap"). This research can help fill that gap.

When writing the literature review, authors must include **full references** for each source they use. They should also clearly explain how these sources relate to each other and how they connect to the research topic.

1. Describe the findings clearly

Write what each document, article, or research paper discovered.

Point out what they have in common and what is different.

2. Show the knowledge gap

Explain what is still not answered or studied.

Show why this gap is important and why your research is needed.

3. Connect the literature to your research

Analyze how the ideas and results from other studies help shape your own study.

Systematically show which theories or concepts you will use.

Summary of the literature review:

At the end, summarize how you used these ideas and theories. Explain **which concepts you chose to include in your research and how you will use them**. Also, mention which parts of your study these theories will support.

Conceptual Framework (1 Page)

This study is a research-based investigation. The researcher has developed a conceptual framework to guide the study clearly and systematically. This framework is based on the concept or theory of _____, together with _____.

The framework helps to explain the main ideas, relationships, and directions of the research. It shows how the key concepts are connected and supports the development of research questions and objectives.

The details of this conceptual framework are presented below.

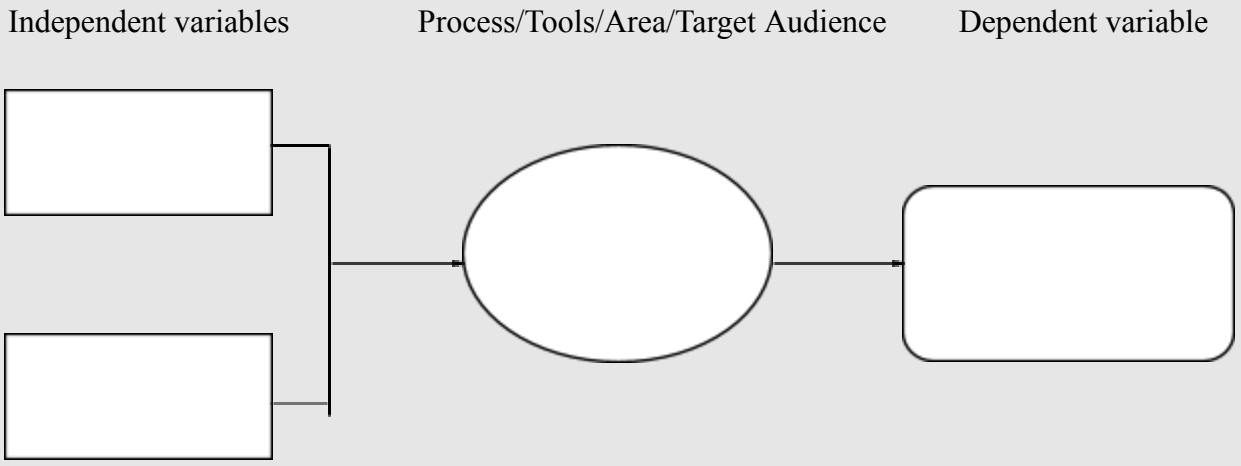

Fig.1 Conceptual Framework

Research Methodology (only 200 words)

Type 1

This research is research. (quantitative/qualitative/mixed methods) Research area is .....Population is ..... Number of ..... people (reference) sample group is ..... Number of .... people using the selection method of ..... (explain the selection in detail). The research tools are ..... types include: 1) Questionnaire (Describe the characteristics, elements, and creation according to whose ideas. Reliability values of research instruments) used in the study..... 2) Interview form (describe characteristics, elements, and whose ideas were created? Reliability values of research tools) used to study ..... 3) Group discussion guidelines (Discussion points, elements, and based on whose ideas) Data was collected by ..... Between the month ..... to the month ..... M.E. ..... Bring quantitative data to analyze with statistics.....(Basic statistics/Reference statistics for quantitative research) and qualitative data Use document research, analyze, synthesize data and then write a descriptive narrative.

Type 2

This research is research. (quantitative/qualitative/mixed methods) Research area is..... The research process is divided into 3 steps as follows.

Step 1 .....

(Sample group, tools, characteristics of tools Tool quality data collection Data analysis, statistics used)

Step 2 .....

(Sample group, tools, characteristics of tools Tool quality data collection Data analysis, statistics used)

Step 3 .....

(Sample group, tools, characteristics of tools Tool quality data collection Data analysis, statistics used)

.....

.....

Research Results (3-4 pages)

Objective 1. The results showed that.....

.....

.....

.....

.....

Table1: .....

Strategy Category	**Items**	**Mean**	**Level**	**Agreement Rate**
General Learning Strategies & Awareness	5 items	4.28	Very High	86-96%
Cognitive Strategies	8 items	4.15	High	69-87%
Social & Interaction Strategies	5 items	4.29	Very High	81-90%
Resource & Environment Use	4 items	4.25	Very High	81-96%
Overall	**30 items**	**4.24**	**Very High**	**75-96%**

Objective 2. The results showed that.....

.....

.....

.....

.....

.....

Knowledge from Research (1 page)

Identify the body of knowledge that is the result of research. Synthesis in the form of diagrams, charts or concept maps with a concise, easy-to-understand format/structure description. Important conclusions and new knowledge obtained from the research, presented in the form of charts or diagrams and explaining the knowledge obtained from the research. Knowledge/innovation from research. Knowledge/innovations arising from research should be written concisely and clearly in line with the stated objectives. It can be presented in a format that is easy for readers to understand, such as tables, graphs, diagrams, pictures or descriptions, etc.

Transferring and Utilizing: Write methods for expanding research results or transferring them for use in academia, communities, society, the economy, or policy proposals.

.....

.....

.....

.....

.....

Conclusion (1 page)

To summarize and identify and the core knowledge that is the result of research.....

.....

.....

.....

Suggestions (only1 page)

This research has found (Knowledge) ..... The important thing is ..... can be applied to ..... should be given importance to ..... for the next research issue, research should be done on the issue of .....

Suggestions for further study

.....

.....

.....

.....

Suggestions for future researchers

.....

.....

.....

Additional suggestions

1. In your article, you must use the APA 7th edition citation style for both in-text citations and the reference list at the end. You can learn more about this style here: APA 7th Guide. The references at the end must be complete and exactly match the sources you cite in the article.
2. You should include 2–3 articles from the journal where you plan to submit your article.
3. You should also cite well-known scholars in your research area.
4. You should use and cite primary sources or the original authors of the theories you mention.
5. If you are submitting your article for academic position consideration, you need to have at least 10 references, including works from both Myanmar and international scholars.
