

Nation

Name of nation: Twin Planet Alliance

Type of government: Federal Republic, composed of two sub-nations

Seat of government / capital city: Capital Station, a large space station which has its origin in early spaceflight of the two member species, located at a Lagrange point between the two planets.

Home planets: Telia (AKA Ediel 2-Alpha) and Idoria. (AKA Ediel 2-Beta)

Home system: The Ediel System

Approximate population: 11 Billion, roughly half on each planet.

Brief description of society:

The Twin Planet Alliance, (TPA), is a nation composed of two species, the Teliates and the Idorians, which was formed soon after both species achieved mutual radio contact, around 250 (local) years ago (which is roughly the same in Earth years.) The two species are considered equals in society. Some Teliates have started a rebellion against the Idorians, because they think of the Idorians as seeing themselves as superior to the Teliates.

Major characters:

- Bered Raen, the Idorian Co-Head of the Alliance
- Trisk Raen, the Teliate Co-Head of the Alliance
- Zux Ereqls, the leader of the Teliate Rebellion

Species (If your nation consists of multiple species, duplicate this section and provide details for each species separately)

Name of species: Teliates

Brief description of species:

A humanoid reptilian species, well adapted to the desert environment of their homeworld, Telia. They stand roughly 2 meters tall on average, and have the unusual feature of being evolutionarily related to, and breeding-compatible with, the Idorians. Teliates, being reptiles, are scaled, with thicker scales on the back and upper legs/arms, with finer scales on the belly, face, lower legs, and forearms. Most Teliates are darker shades of green or blue, with lighter colored ones being rather rare. Limb configuration is 2 human-like (Aegi-like?) arms and 2 digitigrade legs, and their heads have a longer snout.

Birthplace of species (if the same as the current home planet, leave this blank): ---

Brief description of birthplace (if the same as the current home planet, leave this blank):

Name of species: Idorians

Brief description of species: A humanoid amphibian species, well adapted to the oceanic environment of their homeworld, Idoria. They stand roughly 2 meters tall on average, and have the unusual feature of being evolutionarily related to, and breeding-compatible with, the Teliates. Idorians have much smoother skin, while still very finely scaled. Scale color is mostly pale greys and blues, with pale green being rather rare. Limb configuration is 2 human-like arms and 2 human-like legs, although both fingers and toes have webbing between them to aid in swimming, the toes more so than hands, to help with dexterity and tool-use.

Birthplace of species *(if the same as the current home planet, leave this blank):* ---

Brief description of birthplace *(if the same as the current home planet, leave this blank):*

Planetary System *(if your nation is spaceborne and does not inhabit any systems, leave this section blank and provide a description of your fleet under "Miscellaneous")*

Name(s) of star(s): Ediel

List of planets:

- Ediel 1
- Ediel 2-Alpha, AKA Telia
- Ediel 2-Beta, AKA Idoria
- Ediel's Ring
- Ediel 3

Brief description of primary planet(s):

Ediel 1: A small rocky planet without an atmosphere. (roughly like Mercury in our solar system)

Ediel 2-Alpha: Also known as Telia, this planet is mostly desert, with a few small seas, and is the homeworld of the Teliates. It's also in a binary system with Ediel 2-Beta.

Ediel 2-Beta: Also known as Idoria, this planet has most of its surface covered with ocean, with small to medium islands dotted about. It's also in a binary system with Ediel 2-Alpha.

Ediel's Ring: While not technically a planet, this asteroid belt separates the inner portion of the system from Ediel 3, and the TPA has some mining ships stationed here, to supply metals.

Ediel 3: A large, Jupiter-sized gas giant with a couple moons. Nothing too remarkable, honestly. Likely the site of future gas-mining operations, with better crush-proof ships.

List of primary planet's moons *(leave blank if none):*

- Ediel 1: None.

- Ediel 2 System: None
- Ediel 3: 2, both of which are glorified large asteroids that have been caught by the planet's gravity well.

Miscellaneous

Other important notes:

The TPA has very recently achieved FTL travel, but they're eager to go out and explore, hopefully making new friends and allies. The Edeil system is in the Gotet Delta Faros region.
