Open letter to the leadership of the University of Guelph

The University of Guelph's current return to campus plan is insufficient to ensure the safety of the campus and broader Guelph communities. We, the undersigned faculty, staff, students, librarians, alumni, parents, and donors of the University of Guelph, therefore demand that the university administration correct our current path to ensure the safety of everyone on campus.

Today, more than 209 million people worldwide have contracted COVID-19. More than 4.4 million people are dead, including more than 26,000 Canadians¹. Despite excellent vaccine uptake in Canada, only 60% of Ontarians between the ages of 18 and 29 are fully vaccinated so far². This means approximately 40% of Ontarians in this age group are minimally protected or not protected at all against COVID-19. At the same time, in ON as of 18 August 2021, we see the 20-29 year age group reporting both the highest rates of laboratory -confirmed infection, and highest test positivity values despite relatively consistent testing rates (iPHIS most recent data).

In spite of this reality, universities across the country are welcoming students back to campus with only a few institutions enforcing vaccine mandates for all students, staff, and faculty. The University of Guelph is no exception. The university administration, led by Dr. Charlotte Yates, newly appointed as the 9th President and Vice-Chancellor of the University of Guelph, has implemented an attestation-based vaccine mandate that offers no enforcement or consequences for those who are unvaccinated.

At the same time, the administration is welcoming 4,500 students into student housing knowing that almost 40% of them are likely to be under-protected and cannot be fully protected with the current timelines. The University's existing 'plan' will not diminish the chances of an outbreak, nor does it consider the health and wellness of students, staff, or faculty. The current return to campus plan is insufficient to minimize the risk of outbreaks, serious illness, hospitalizations, and/or deaths. This is especially concerning, when recent analysis using ON case data, suggests that the relative risk of hospitalization for delta infections compared to wild type SARS-CoV-2 (even after controlling for vaccine status, age and time) is elevated (20-29 years old:RR=1.81, 95% 1.12-2.93).

Further, given current vaccination rates for this age group, we expect more than 9,000 non-residence students returning to campus to be under-protected. These students will participate in face-to-face classroom settings, putting others at risk of infection including children

¹ <https://www.worldometers.info/coronavirus/>

² <https://covid19tracker.ca/provincevac.html?p=ON>

and immunocompromised members of our campus community - individuals who can not be vaccinated. There is no plan to incorporate physical distancing in a way that would prevent the transmission of the Delta variant, and not all public spaces have been included in the ventilation audit and improvement plan.

Requests from instructors to shift course formats away from in-person learning in an effort to protect their students and their families have been denied.

The University Leaders have failed to properly mandate vaccinations, and have continued to forge ahead with a plan that is not sufficient, nor evidence-based, to protect our community members on- and off-campus given the evolving epidemiological situation. Current epidemiology clearly shows that the delta variant comprises >90% of all SARS-CoV-2 infections in ON, is extraordinarily more transmissible than both the wild type and the alpha variant, and appears to result in an increased risk of hospitalization for those who become infected. We, the undersigned, demand that the university administration correct our current path to ensure the safety of everyone on campus.

To that end, we the undersigned demand that:

University leaders shift all courses to remote offering for the beginning of the Fall 2021 semester until such time as there is an enforced vaccine mandate (with medical exemptions), every on-campus community member is fully vaccinated, and logistics for physical distancing in all campus spaces have been appropriately, effectively, and transparently organized.

The implementation of an infection prevention and control plan for campus must recognize the need for a layered approach that includes all of the necessary control measures including engineering controls, administrative controls, and PPE. PPE alone is insufficient to minimize the risk that delta presents on campus especially in indoor settings with no physical distancing.

Sincerely,

1. Daniel Gillis, Associate Professor, School of Computer Science
2. Shoshanah Jacobs, Associate Professor, Department of Integrative Biology
3. Scott Weese, Professor, DVM, DVSc, OVC
