

## MODULE DESCRIPTION OF DISEASE AND FISH HEALTH MANAGEMENT

<b>Nutritional physiology biochemistry</b>	Disease and Fish Health Management		
<b>Module level</b>	7		
<b>Code</b>	19I06211803		
<b>Subtitle</b>	-		
<b>Course</b>	Fish Disease and Health Management		
<b>Semester(s) in which the module is taught</b>	1 <sup>st</sup> Semester		
<b>Person responsible for the module</b>	Prof. Dr. Ir. Hilal Anshary, M.Sc.		
<b>Lecturer(s)</b>	1. Prof. Dr. Ir. Hilal Anshary, M.Sc. 2. Dr. Ir. Sriwulan, MP, 3. Dr.Ir.Gunarto Latama, M.Sc		
<b>Language</b>	Indonesian		
<b>Relation to curriculum</b>	<b>Programme</b>	<b>Mode</b>	<b>Semester</b>
	MSc. Fisheries science	Elective	1 <sup>st</sup>
<b>Type of teaching, contact hours</b>	Contact hours and class size separately for each teaching method: lecture, lesson, practical, project, seminar, etc.		
	<b>Taeching Method</b>	<b>Contact Hours per week</b>	<b>Class Size</b>
	Lecture	1.7	40
	Exercises	2.0	40
<b>Workload</b>	(Estimated) workload, divided into contact hours (lecture, exercise, laboratory session, etc) and private study, including examination preparation, specified in hours		
	<b>Contact Hours per week</b>	<b>Private Study per week</b>	<b>Semester Workload</b>
	3.7	2.0	91.2 h
<b>Requirements according to the examination regulations</b>	In order to pass the module, student must obtain a minimal final grade of D ( $\geq 45$ ). This value is the average value of 5 lecturers (Exam. Reg.)		
<b>Recommended prerequisites</b>	Formal : none Content : none		
<b>Module objectives/intended learning outcomes</b>	<p>After having finished the module, students are able to:</p> <p><b>Knowledge:</b></p> <ul style="list-style-type: none"> <li>- Having knowledge of the principles of fish health management in various aquaculture systems and technologies.</li> </ul> <p><b>Skills:</b></p> <ul style="list-style-type: none"> <li>- Apply science and technology in carrying out fish control measures appropriately and efficiently, apply principles of fish health management to control bacterial, fungal, and viral diseases in fish and shrimp.</li> </ul> <p><b>Competenciess:</b></p> <ul style="list-style-type: none"> <li>- Be able to explain, apply, and plan fish health management principles in disease control in farmed animals. Involves pathogen identification, diagnosis, prophylaxis measures, understanding of environmental influences on fish health, as well as planning fish health management and live fish trade at regional, national, and international levels</li> </ul>		
<b>Content</b>	This course will discuss general fish health management, prophylaxis and disease prevention measures in various aquaculture systems, disease control by vaccination, the use of probiotics and various types of immunostimulants, the relationship between water quality and the presence of disease, and the principles of fish health management to prevent parasitic, bacterial, fungal and viral diseases in aquaculture systems.		
<b>Study and examination requirements and forms of examination</b>	<p>Lecture:</p> <ul style="list-style-type: none"> <li>● Partial quizzes</li> <li>● Lectures/lectures</li> <li>● Studying</li> </ul>		

	<ul style="list-style-type: none"> <li>● Collaborative group discussions</li> </ul>
<b>Media employed</b>	LCD, website, print out, computer, library
