Abstract

The abstract must be written in English. It should consist of one paragraph with a length of 150–250 words and contain the background and rationale, objectives, methods (design, participants or sample, instruments, and analysis), key results, conclusions, and the contributions of the study. At the end of the abstract, three to five keywords or phrases should be provided.

Keywords: Keyword 1, Keyword 2, Keyword 3

INTRODUCTION

The introduction must logically present the general background and rationale of the study and a review of related literature. It should highlight how the present work differs from earlier studies and, in its final section, state the research purpose or questions as well as the novelty of the study.

XX.

MATERIALS AND METHODS

Research Design

The method section should clearly describe the research design, the population and sample or participants, the instruments and materials used, the procedures followed in conducting the research, and the techniques employed in both data collection and data analysis.

Research Locale and Respondents/Participants

This section should present a comprehensive description of the study's research setting, participant groups, and sampling design. Clearly detail the characteristics of the respondents/participants as well as the methods used to select them. When possible, include a GIS-ready map to provide a visual representation of the research locale.

Research Instrument

This section should provide an in-depth explanation of the research instruments utilized in the study. Include details on their structure, development, and purpose, as well as evidence of validity and reliability to establish the credibility of the tools used.

Data Gathering Procedure

This section should describe in detail the step-by-step processes followed in collecting data throughout the study. Explain the protocols, timelines, permissions obtained, and methods implemented to ensure accuracy, consistency, and ethical compliance in data collection.

Data Analysis

This section should outline the statistical tools, data analysis techniques, and software (including version) employed in processing and interpreting the data. Clearly explain how each method aligns with the study objectives and contributes to the robustness of the findings.

Ethical Considerations

Describe how participants' rights, privacy, and confidentiality were protected, including informed consent procedures, voluntary participation, and data security measures. If applicable, address how potential risks were minimized and how ethical issues were managed during the research process. Length: 1 or 2 paragraphs only.

RESULTS AND DISCUSSION (HEADING 1)

Heading 2 – sub-heading (subchapters)

The results and discussion should present the findings supported by appropriate data, such as tables, figures, or statistical analyses. These results must directly address the research objectives or hypotheses outlined in the introduction. The discussion must explain how the findings relate to the research questions (what/how), provide scientific interpretations (why), compare results with those of other investigators (what else), and account for similarities, differences, and implications. This section should also highlight the contribution of the study to theory, practice, or policy.

Heading 3 – sub-heading (subchapters)

Figure 1. Insert Figure Caption

Table 1. Insert Table Title

No	Name	Description
1	AAAAAAA	aaaaaaaaaaaaa
2	BBBBBBB	bbbbbbbbbbbbb
3	CCCCCCC	ccccccccccccccc
5	DDDDDDD	ddddddddddddddd
6	EEEEEEE	eeeeeeeeeeeeeee
7	FFFFFFF	fffffffffffffffffff
8	GGGGGGG	ggggggggggggggg
9	HHHHHHH	hhhhhhhhhhhhhhh

CONCLUSION

The conclusion should summarize the main findings and how they answer the research objectives, while also emphasizing their significance and contributions. It should not simply repeat the abstract or results but instead highlight the implications, provide recommendations, and suggest directions for future research.

Acknowledgement

This section should recognize all individuals, institutions, and funding agencies that supported the conduct of the study. Please specify any grants or financial assistance received.

Conflict of Interest

Authors must disclose any potential conflicts of interest—financial, professional, or personal—that could influence the research or its interpretation. If no conflicts exist, kindly include a statement declaring such.

Ethical Statement

Provide a brief statement indicating that the study adhered to ethical standards, including the name of the approving ethics review committee and the corresponding approval or protocol code.

REFERENCES

The references should include only sources cited in the manuscript. At least 20 references are required, with 80% drawn from primary sources such as peer-reviewed journal articles. Most references should be from international authors and reputable sources published within the last 10 years, unless citing seminal works. Authors are encouraged to use reference management software such as EndNote, Mendeley, or Zotero. All references must conform to the American Psychological Association (APA) 7th edition citation style.
