

**Here is my guide to downloading and viewing files from my site!**

Most of my files should be able to be viewed in the google drive player! but sometimes the quality can be compromised or it just won't play. I recommend downloading the files but what do you do with these tp/ts files next?

**For TP/TS files:** these files can be viewed with [VLC Media Player](#) on pc, for mobile there is VLC for android and apple!! search VLC media player.

**For MP4/Other:** these files can be viewed like normal after downloading or simply viewed in google drive player!

**Looking to convert your TP/TS files to another format?**

VLC can do that too! here is a [guide](#) to converting to your files.
