

ASPECTS AND COMMON CONCEPTS

POLITICAL

Political means... everything to do with government authority over people or states, and is often associated with how a territory or region is governed. Political also has to do with authority in general, and relationships between those in power and the people who want that power. Politics often involves debates, arguments or even war.

DEMOGRAPHIC

Demographic is... how we break down and understand "human populations". It's when we think of the different "groups of people", whether those are cultural groups, or even when we count people in terms of age, sex, religion... or anything else! Often when we consider demographics of a society, people, or even region, we use "statistics" to show and compare how many people are in each group. Often you will see graphs, charts and tables when people talk about demographics!

(Related: see **SOCIAL** aspect in [this longer list](#).)

ECONOMIC

Economy... In simpler terms it's anything to do with "subsistence" or just having enough to live, and of course in today's world with anything to do with money. It's also when we talk about the production and the distribution of "resources", of transportation to and fro, and of course the way we "consume" or use those resources. And don't forget taxes.

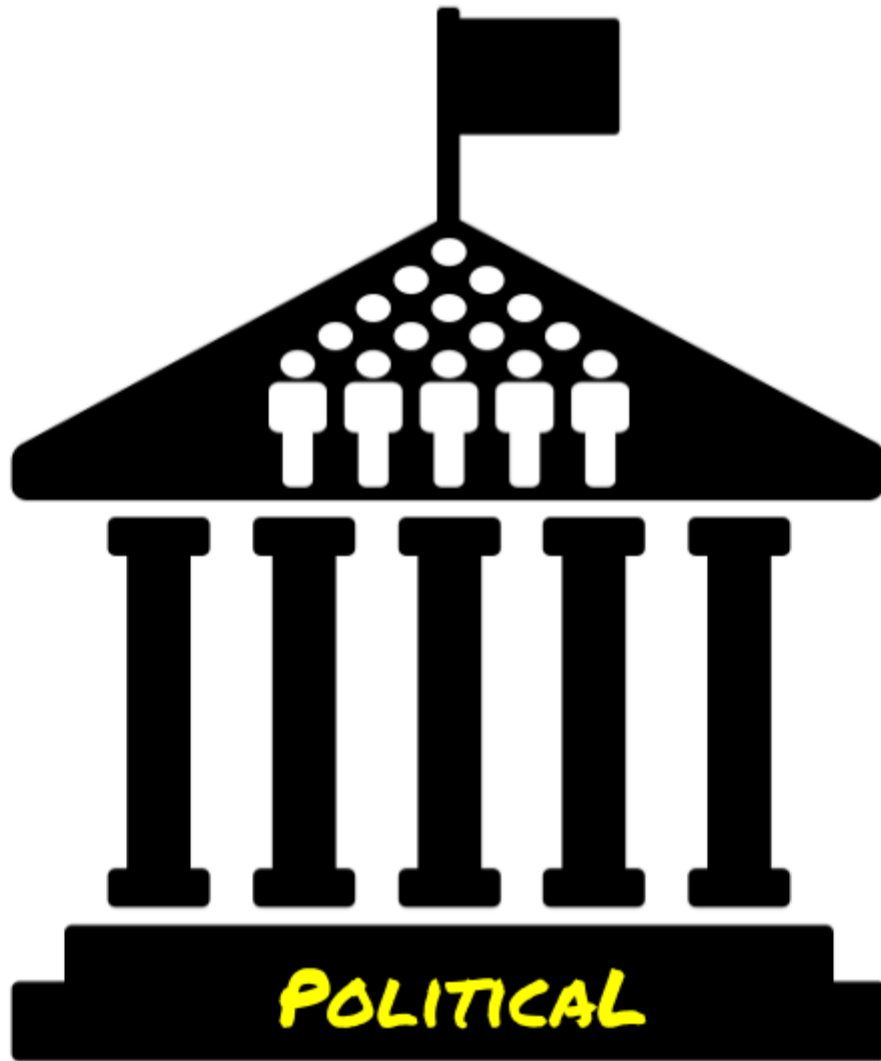

CULTURAL

Cultural, and culture in general means... anything to do with art (literature, music, painting, theatre, cinema, dance, etc.) But it's also about education and knowledge. And finally, believe it or not, it's about belief, religion, customs and traditions. (And yes, customs include sports, food, etc., etc.) It's a lot to talk about, oh, and yes, it includes the language we speak too!
