

ST. PAUL SCIENCE

Welcome to the Science Department at St. Paul Catholic Secondary School, where theory and the real world come together to give students a fulfilling Catholic educational experience. It's where students are encouraged to explore their curiosity, develop and apply critical thinking skills, and to gain a deeper understanding of the world around us with inspired hands-on exploration.

Rooted in Catholic Faith and guided by the [Ontario Science Curriculum](#), [Ontario Catholic School Graduation Expectations](#), our department is committed to providing engaging, inquiry-based learning experiences in Biology, Chemistry, Physics, and Environmental science.

Through rigorous academics, hands-on laboratory investigations, collaborative projects, and real-world problem-solving, we inspire students to develop scientific literacy and the skills needed for success not only in post-secondary studies, but in their future careers. We look forward to fostering a learning environment where every student can explore, question, and discover. To discover more, please visit the [pathways](#) your child can pursue at St. Paul Catholic Secondary School.
