

Meeting Notes

Rocky Linux Testing Team Meeting

December 18, 2025

Agenda

-

Attendees

- Stack
- Leigh
- Bob
- Trevor
- Ahmer
- Owen
- Jess
-

Scribe

Jessica Jonutz

Minutes

- Stack: Lukas would like to start doing weekly look-aheads, weekly release of 9.
 - Trevor: do you know if Lukas is planing on overriding the current look-ahead? Would be hard to track down issues if it is overridden.
- Stack: New year goals: help with kickstart and sparky tests, openQA automation.
- Stack: any projects the team is working on?
 - Ahmer, no current projects, but happy to take on tasks - sparky and kickstart

- Stack: Trying to grab as much kickstart documentation as possible. Browse through documentation and grab any tests you'd like. docs.rockylinux.org
- Bind test - updated package, docs would fail with an error. We made sure to add that in. issue with DNF switching modules - had a break in it.
- Bob: I'll be looking at our testing wiki, needs some updates especially for 10. Would be great if we could have a place for testing status and reviews - matrix of sparky in Docs is needed.
 - Stack: Git repo for Sparky contains the matrix
 - Would be great if we could get this over to our wiki, too.
- Trevor: i want to start working on rocky 10 packaging for OpenQA. Add package builds to koji's automated system. Also, working on getting OpenQA working a little bit better - few things are broken
- If you're looking for stuff to do, sparky is an easy start. Kickstar is a little more complicated. Ping bob or trevor to get started with Kickstart.
