

Arbitrage betting

Everyday you see “pro” bettor who make thousands of \$\$, and you’re wondering how they do that ? Well, I won’t teach you how to make thousands quickly from one lucky bet nor how to find outsider teams with big odds. However, I can teach you how to make arbitrage bets, in order to make daily risk-free money. So how can you make money with arbitrage betting ?

!\\ THIS IS A REAL MONEY-MAKING METHOD, so if you are lazy or willing to make money without thinking on auto-pilot, this is not the right method !\\

1.What is arbitrage betting ?

The purpose of this method is to find risk-free matches to bet on. But how can you find one ? Well, let's take the example of two bookmakers, for the next Real Madrid vs FC Barcelona soccer match. Let's assume that unibet thinks that Madrid will win, whereas winamax thinks that Barcelona will win. In this case unibet will put an odds of 3 on Madrid and winamax also a 3, but on Barcelona. In this case if you stake 50/50 on Madrid with unibet and on Barcelona with winamax, then you'll win in each case. This table summarizes the situation:

	unibet	winamax	Profit
Madrid	+\$50*3	-\$50	\$50
Barcelona	-\$50	+\$50*3	\$50

Here, in each case you make a total profit of \$50. Those are the situations we will be seeking in order to place arbitrage bets. Of course, a situation where you will earn x1,5 your total stake is really rare and you need to be really fast in order to place the bet and win.

2.How to find arbitrage bet opportunities ?

Now that you know what arbitrage betting is you can understand why this is so hard to find. For every match, odds are always changing, there are a lot of different bookmakers and too much maths to do in order to know if this is a good opportunity. Moreover if you want to have a chance to stand against other “arbitrage hunters”, you need to be able to instantly see if this match is a good opportunity, by doing maths but also intuition. This comes with experience: the more you bet, the better at arbitrage you become. But if you don't feel like doing calculations, you can use data sciences services like oddsjam, to find opportunities. However you might realize that those services are really expensive. This is why I started my own service at only \$20 per month. By joining my group, you'll get instant notifications when an opportunity comes. You'll be able to see EVERY arbitrage bet opportunities in real time

with best profitability. This is really cheap considering the fact that you'll earn daily **risk-free** just by following the instructions you'll get. When you'll receive a notification, the instructions will look like that:

The image is a screenshot of a Telegram chat interface. At the top, the chat name is 'basketball_euroleague'. Below it, the timestamp is '2021-10-14T17:00:26Z'. The word 'Profit' is followed by '194.23%'. Below this, there is a table with two columns: 'unibet' and 'pinnacle'. The first row of the table lists 'FC Bayern München' and 'Zenit Saint Petersburg'. The second row shows odds '8.5' and '4.5'. The third row shows percentages '34.61%' and '65.38%'.

unibet	pinnacle
FC Bayern München,	Zenit Saint Petersburg,
8.5,	4.5,
34.61%	65.38%

All you have to do is stake 36.61% of your total stake on Bayern München with Unibet and 65.38% of your total stake on Petersburg with Pinnacle in order to double (194.23%) your total stake. Arbitrage betting is a fabulous way to make money on a daily basis without taking any risk. Nevertheless if you're not using a data science service, you won't be able to properly track all the opportunities the market can offer.
