

0:01 So when you log into Clever, you have the option to add any kind of apps that you want to use in your particular classroom.

0:08 You are free to use any from the library. What you'll do is you'll go to the library and search for a common app that you might use.

0:16 As you should already. You have a couple MobyMax will already be in there and your iPod will already be in there.

0:22 But once you go through, you can search by grade, you can search by topic. So say you wanted to add Khan Academy, you're going to click on it.

0:31 You're going to click install. You're going to click install. You're going to click install. You're going to click install. You're going to click allow and continue.

0:36 And this is automatically going to generate accounts for all of my students. So I don't have to go in and do it.

0:41 So I have an account so I'm going to log into my existing account. And then you will go, through the motions to set that up.

0:51 Once you have that all set up, you can find the app under your personal, your student page and it will be right here.

1:01 So when you want to use it in the classroom, you will tell your students, click on my teacher. Page and click on Khan Academy and when they click on it, it will automatically log them into the account that generated itself.

1:12 So definitely take some time. Look through the library search and see if they have some of your favorite apps might be on here already.

1:19 It will save you a lot of time. Versus having to go in and log in every single student.
