

CEU-Manila's Commitment to SDG 6: Clean Water and Sanitation

In line with our institutional philosophy of **Ciencia y Virtud (Science and Virtue)**, Centro Escolar University-Manila campus actively integrates the United Nations Sustainable Development Goals (SDGs) into its daily operations. Our efforts are particularly focused on SDG 6: Clean Water and Sanitation, demonstrating our commitment to the well-being of the entire academic community.

A key component of our strategy is raising awareness and promoting responsible behavior among students, teachers, and non-teaching staff. One of the most visible ways we achieve this is through the strategic placement of signage across the campus. These signs, bearing simple but impactful messages like “Conserve Water. Use it Wisely”, serve as constant reminders of our shared responsibility to protect this vital resource.

This initiative is a direct and actionable way to address UN SDG 6. By prompting individuals to be more mindful of their water usage, these postings contribute to the goal of substantially increasing water-use efficiency across all sectors of the university. The messaging encourages everyone to take simple yet effective steps, such as turning off faucets completely, reporting leaks, and being conscious of water consumption in restrooms, laboratories, and common areas.

The signs are practical application of our institutional values. They embody **Ciencia** by promoting a science-based understanding of resource scarcity and the importance of conservation. They also reflect **Virtud**, as they appeal to the moral and ethical duty we have to use resources responsibly and to act in a way that benefits not just ourselves but the wider community and future generations.

Through these seemingly small but significant actions, CEU-Manila foster a culture of sustainability and environmental stewardship, directly translating the principles of SDG 6 into tangible daily habits and reaffirming our dedication to a more sustainable future.
