

Senior Frontend Engineer

Open Source

This is a contract-based position.

About the opportunity:

The VictoriaMetrics team is on a mission to provide high-quality open-source solutions for observability. This includes solutions for logs, metrics and traces. All the work we do is publicly available on Github and is used by thousands of users every day. We are now looking for a Senior Frontend Engineer to join our team and sustain the increase in popularity and demand for our open-source software.

Role Overview:

As Senior Frontend Engineer you will be responsible for creating and maintaining solutions for the analysis of observability signals such as metrics, logs and traces. You'll be developing the [vmui](#) product for VictoriaMetrics and VictoriaLogs software. You'll also be responsible for the integration of VictoriaMetrics and VictoriaLogs with Grafana as datasource plugins. This role involves the mindset of an open-source maintainer developing publicly available and open products, communicating with users and focusing on usability.

Key Qualifications:

- 3+ years of engineering experience.
- Extensive hands-on experience with React and TypeScript/JavaScript.
- Strong understanding of UI/UX design principles and best practices.
- Skilled in observability practices.
- Contributions to open-source projects are a significant plus.
- Initiative at the level of independent project/task management.
- Experience with building REACH interface and data visualization tools.

Technology Stack:

- React / Preact / TypeScript
- SASS, CSS Modules, CSS-in-JS

- Webpack, REST API, ESLint

Together we will:

- Work on key infrastructure scalability and system reliability projects
- Support your professional and personal growth: You will be working directly with founders
- Support and encourage your individual initiatives

We run a remote work model, and flexible working hours.

About VictoriaMetrics:

We are the company behind the popular open-source, high-performance time-series database and monitoring solution: VictoriaMetrics. We've also recently introduced a new open-source logs management solution, VictoriaLogs. Fortune 500 companies use our products as their core monitoring solution. Our services are [used by](#) Hubspot, Adidas, WIX, Grammarly, CERN and [thousands others](#). Our open-source products have been downloaded 750M+ times to date.

We are profitable with a fully remote team distributed worldwide.

Interview Process:

1. **Introductory Video Call (30 mins):** Meet one of our founders to discuss your experience and fit.
2. **Technical Interview (1 hour):** Dive deep into your technical skills with our team.
3. **Second Technical Interview (Optional, 1 hour):** An additional session to explore further areas, if necessary.
4. **Offer:** Embark on your journey with VictoriaMetrics.
