

## **Sustainability**

### **Infrastructure:**

This category includes the physical and organizational structures and facilities needed for the operation of a community. This includes transportation systems like roads and public transit, utilities like water and electricity, and public spaces like parks and community centers. The quality and accessibility of this infrastructure can greatly influence the community's environment. (Please click on the link to see the subcategories)

- i. Transportation: This includes roads, public transit, bike lanes, and sidewalks.
- ii. Utilities: This includes water, electricity, and internet infrastructure.
- iii. Public Spaces: Parks, community centers, and other public spaces can impact the community's quality of life.
