PRE-BOARD EXAMINATION

Class - X Session 2022-23

Subject - Mathematics (Basic)

Maximum Marks: 80

General Instructions:

Time Allowed: 3 Hours

- 1. This Question Paper has 5 Sections A, B, C, D, and E.
- 2. Section A has 20 Multiple Choice Questions (MCQs) carrying 1 mark each.
- 3. Section B has 5 Short Answer-I (SA-I) type questions carrying 2 marks each.
- 4. Section C has 6 Short Answer-II (SA-II) type questions carrying 3 marks each.
- 5. Section D has 4 Long Answer (LA) type questions carrying 5 marks each.
- 6. Section E has 3 Case Based integrated units of assessment (4 marks each) with sub-parts of the values of
- 1, 1 and 2 marks each respectively.
- 7. All Questions are compulsory. However, an internal choice in 2 Qs of 2 marks, 2 Qs of 3 marks and 2 Questions of 5 marks has been provided. An internal choice has been provided in the 2 marks questions of Section E.
- 8. Draw neat figures wherever required. Take π =22/7 wherever required if not stated

Section A

Section A consists of 20 questions of 1 mark each.

Q1.	If two positive integers a and b are written as $a = x^4y^2$ and $b = x^2y^3$; where a and b are prime numbers, then find the HCF(a,b).			a and b are prime	1
	$(a) xy^3 (b)$	(x^2y^2)	$(c)x^3y^2$	$(d)x^4y^3$	
Q2.	On comparing the ratios $\frac{a_1}{a_2}$, $\frac{b_1}{b_2}$ and $\frac{c_1}{c_2}$ of lines representing the given pair of linear equations			of linear equations	1
	5x - 4y - 8 = 0 a)Coincident	(1) Parallel		
	(c)Intersecting at exactly one	point (c	d) Intersecting at exactly	two points	
Q3.	What will be the Discriminant of $x^2 + 5x + 5 = 0$				1
	(a)D = -5	(b)D=5	(c)D = 4	(d)D=0	
Q4.	The decimal expansion of the rational number $\frac{14587}{1250}$ will terminate after			1	
	(a) one decimal place	-200	(b) two decimal p		
	(c) three decimal places		(d) four decimal p	blaces	
Q5.	If α and $\frac{1}{\alpha}$ are the zeroes of the polynomial $4x^2 - 2x + (k-4)$, then the value of k.			1	
	a) k=0 (b) k=6	(c) k=4	(d) k=8	
Q6	The perimeter of a triangle with vertices $(0, 12)$, $(0, 0)$ and $(5, 0)$ is			1	
	(a) 5 units (b)	17 units	(c) 30 units	(d) $(17 + \sqrt{5})$ units	

	a) (12,8) (c)(5,4) (b)(3,2) (d)(20,16)	1
	(c)(5,4) (d)(20,16)	1
Q8.	A A	1
	2.4 cm P Q 3.6 cm 4.8cm C In the given figure if PQ BC then the value of x=	
	a) 1.2 cm (b) 3.2cm	
	(c) 1.6 cm (d) 3.4cm	
	The value of $Sin^2 30^{\circ}$ - $Cos^2 30^{\circ}$ is a) $\frac{-1}{2}$ (b) $\frac{\sqrt{3}}{2}$ (c)) $\frac{3}{2}$ (d)) $\frac{2}{3}$	1
	If $\triangle ABC$ is right angled at C then value of $Cos(A + B)$ is (a)0 (b)1 (c) $\frac{1}{2}$ (d) $\frac{\sqrt{3}}{2}$	1
	If SecA+ TanA = x, then TanA= (a) $\frac{2}{x}$ (b) $\frac{1}{2x}$ (c) $\frac{x^2-1}{2x}$ (d) $\frac{2x}{x^2-1}$	1
Q12.	Two parallel lines touch the circle at point A and B respectively. If area of the circle is 36π sq.cm, then AB= a)6 cm (b) 8cm (c) 10cm (d) 12 cm.	1
Q13.	A quadrilateral ABCD is drawn to circumscribe a circle . If $AB = 12$ cm , $BC = 16$ cm and $CD = 15$ cm. then $AD = \dots$	1
	a)13 cm (b)12cm (c)11cm. (d)10cm In the given figure, 3 sectors of a circle of radius 7 cm. making angles of 60°, 80° and 40° at the centre are shaded. The area of the shaded region in sq. cm. is a)77 (b) 154 (c)44 (d)22	1
Q15.	The least number which is a perfect square and is divisible by each of 16, 20 and 24 is (a) 240 (b) 1600 (c) 2400 (d) 3600	1

	Fig-2		
	In the given (figure-2) $\geq A = \geq B$ and $AD = BE$. Show that $DE AB $		
Q23.			
	6 cm ?		
Q24.	PQ is a tangent drawn from an external point P to a circle with centre O,	2	
	QOR is the diameter of the circle. If \geq POR=120°, what is the measure of \geq OPQ? $QOR = 120^{\circ}$		
Q25.	The perimeter of a sector of a circle of radius 5.2 cm is 16.4cm. Find the area of the sector. or, In a circle of radius 21 cm, an arc subtends an angle of 60° at the centre. Find the area of sector formed by the arc.		
	Section C		
	Section C consists of 6 questions of 3 marks each.		
Q26.	Prove that $\sqrt{3}$ is irrational.	3	
Q27	A boat covers 32 km upstream and 36 km downstream in 7 hours. Also, it covers 40 km upstream and 48 km downstream in 9 hours. Find the speed of the boat in still water and that of the stream.		
	Or,		
	The area of a rectangle gets reduced by 9 square units, if its length is reduced by 5 units and the breadth is increased by 3 units. The area is increased by 67 square units if length is increased by 3 units and breadth is increased by 2 units. Find the perimeter of the rectangle.		
Q28.	If the zeroes of the quadratic polynomial $x^2 + (a + 1)x + b$ are 2 and -3, then find the value of a and b.	3	
Q29.			
	Or,		

 Prove that: (cot cot θ - θ)² = 1-coscos θ / 1+coscos θ / 1+coscos θ Q30. Prove that the tangents drawn at the ends of a diameter of a circle are part of the zeroes of the quadratic polynomial 5x² + 8x - 4 and verify the zeroes and the coefficients of the polynomial. Section D Section D consists of 4 questions of 5 max would have taken 3 hours more to cover the same distance. Find the order of the two squares is 400 sq.cm. If the difference of their part of the two squares. Q33. Prove that If a line is drawn parallel to one side of a triangle to intersect distinct points, the other two sides are divided in the same ratio. In the figure, find EC , if (ii) area of the sector formed by the arc (iii) area of the segment formed by the corresponding chord. Q35. An observer finds the angle of elevation of the top of the tower from a as 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. Or, From a top of a building 100 m high the angle of depression of two objects. Section E 		
 Q30. Prove that the tangents drawn at the ends of a diameter of a circle are proposed. Find the zeroes of the quadratic polynomial 5x² + 8x - 4 and verify to zeroes and the coefficients of the polynomial. Section D Section D consists of 4 questions of 5 max. Q32. A train covers a distance of 480 km at a uniform speed. If the speed had would have taken 3 hours more to cover the same distance. Find the oracle of the two squares. Q33. Prove that If a line is drawn parallel to one side of a triangle to intersect distinct points, the other two sides are divided in the same ratio. In the figure, find EC , if AB B = AE EC using the above theorem Q34. In a circle of radius 21 cm. an arc subtends an angle of 60° at the central and find (i)the length of the arc (ii) area of the sector formed by the arc (iii) area of the sector formed by the corresponding chord. Q35. An observer finds the angle of elevation of the top of the tower from a sa 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. Or, From a top of a building 100 m high the angle of depression of two objects. 		
Section D Section D consists of 4 questions of 5 ma Q32. A train covers a distance of 480 km at a uniform speed. If the speed had would have taken 3 hours more to cover the same distance. Find the or Or, Sum of the areas of two squares is 400 sq.cm. If the difference of their psides of the two squares. Q33. Prove that If a line is drawn parallel to one side of a triangle to intersect distinct points, the other two sides are divided in the same ratio. In the figure, find EC , if $\frac{AD}{DB} = \frac{AE}{EC}$ using the above theorem Q34. In a circle of radius 21 cm. an arc subtends an angle of 60° at the centre and find (i)the length of the arc (ii) area of the sector formed by the arc (iii) area of the segment formed by the corresponding chord. Q35. An observer finds the angle of elevation of the top of the tower from a case of the sector formed by the corresponding chord. Q36. An observer finds the angle of elevation of the top of the tower from a case of the sector formed by the corresponding chord. Q37. From a top of a building 100 m high the angle of depression of two objects.	arallel.	3
Q32. A train covers a distance of 480 km at a uniform speed. If the speed had would have taken 3 hours more to cover the same distance. Find the or Or, Sum of the areas of two squares is 400 sq.cm. If the difference of their paides of the two squares. Q33. Prove that If a line is drawn parallel to one side of a triangle to intersect distinct points, the other two sides are divided in the same ratio. In the figure, find EC , if $\frac{AD}{DB} = \frac{AE}{EC}$ using the above theorem Q34. In a circle of radius 21 cm. an arc subtends an angle of 60° at the centre and find (i)the length of the arc (ii) area of the sector formed by the arc (iii) area of the segment formed by the corresponding chord. Q35. An observer finds the angle of elevation of the top of the tower from a case 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. From a top of a building 100 m high the angle of depression of two objects.	he relationship between the	3
Q32. A train covers a distance of 480 km at a uniform speed. If the speed had would have taken 3 hours more to cover the same distance. Find the or Or, Sum of the areas of two squares is 400 sq.cm. If the difference of their psides of the two squares. Q33. Prove that If a line is drawn parallel to one side of a triangle to intersect distinct points, the other two sides are divided in the same ratio. In the figure, find EC , if \[\frac{AD}{DB} = \frac{AE}{EC} \] using the above theorem Q34. In a circle of radius 21 cm. an arc subtends an angle of 60° at the centre and find (i)the length of the arc (ii) area of the sector formed by the arc (iii) area of the segment formed by the corresponding chord. Q35. An observer finds the angle of elevation of the top of the tower from a cas 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. Or, From a top of a building 100 m high the angle of depression of two objects.		
Q32. A train covers a distance of 480 km at a uniform speed. If the speed had would have taken 3 hours more to cover the same distance. Find the or Or, Sum of the areas of two squares is 400 sq.cm. If the difference of their psides of the two squares. Q33. Prove that If a line is drawn parallel to one side of a triangle to intersect distinct points, the other two sides are divided in the same ratio. In the figure, find EC , if \[\frac{AD}{DB} = \frac{AE}{EC} \] using the above theorem Q34. In a circle of radius 21 cm. an arc subtends an angle of 60° at the centre and find (i)the length of the arc (ii) area of the sector formed by the arc (iii) area of the segment formed by the corresponding chord. Q35. An observer finds the angle of elevation of the top of the tower from a cas 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. Or, From a top of a building 100 m high the angle of depression of two objects.	arks each.	
g33. Prove that If a line is drawn parallel to one side of a triangle to intersect distinct points, the other two sides are divided in the same ratio. In the figure, find EC , if $\frac{AD}{DB} = \frac{AE}{EC}$ using the above theorem 2 cm B will be above theorem 2 cm B will be above theorem 2 cm B will be above theorem 3 cm B will be above theorem 2 cm B will be above theorem 3 cm B will be above theorem 4 cm B will be above theorem 2 cm B will be above theorem 4 cm B will be above theorem 5 cm B will be above theorem 6 cm B will be above theorem (ii) area of the sector formed by the arc (iii) area of the segment formed by the corresponding chord. 9 cm B will be above theorem 7 cm Will be above theorem 9 cm B will be above theorem 9 cm B will be above theorem 10 cm B will be above theorem 11 cm B will be above theorem 12 cm B will be above theorem 13 cm B will be above theorem 14 cm B will be above theorem 15 cm B will be above theorem 16 cm B will be above theorem 17 cm B will be above theorem 18		5
distinct points, the other two sides are divided in the same ratio. In the figure, find EC , if $\frac{AD}{DB} = \frac{AE}{EC}$ using the above theorem 2 cm	perimeters is 16 cm, find the	
Q34. In a circle of radius 21 cm. an arc subtends an angle of 60° at the centre and find (i)the length of the arc (ii) area of the sector formed by the arc (iii) area of the segment formed by the corresponding chord. Q35. An observer finds the angle of elevation of the top of the tower from a cas 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. Or, From a top of a building 100 m high the angle of depression of two objects.	the other two sides in	5
Q34. In a circle of radius 21 cm. an arc subtends an angle of 60° at the centre and find (i)the length of the arc (ii) area of the sector formed by the arc (iii) area of the segment formed by the corresponding chord. Q35. An observer finds the angle of elevation of the top of the tower from a cas 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. Or, From a top of a building 100 m high the angle of depression of two objects.		
Q34. In a circle of radius 21 cm. an arc subtends an angle of 60° at the centre and find (i)the length of the arc (ii) area of the sector formed by the arc (iii) area of the segment formed by the corresponding chord. Q35. An observer finds the angle of elevation of the top of the tower from a cas 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. Or, From a top of a building 100 m high the angle of depression of two objects.		
Q34. In a circle of radius 21 cm. an arc subtends an angle of 60° at the centre and find (i)the length of the arc (ii) area of the sector formed by the arc (iii) area of the segment formed by the corresponding chord. Q35. An observer finds the angle of elevation of the top of the tower from a cas 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. Or, From a top of a building 100 m high the angle of depression of two objects.		
and find (i)the length of the arc (ii) area of the sector formed by the arc (iii) area of the segment formed by the corresponding chord. Q35. An observer finds the angle of elevation of the top of the tower from a cas 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. Or, From a top of a building 100 m high the angle of depression of two objects.		
and find (i)the length of the arc (ii) area of the sector formed by the arc (iii) area of the segment formed by the corresponding chord. Q35. An observer finds the angle of elevation of the top of the tower from a cas 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. Or, From a top of a building 100 m high the angle of depression of two objects.		
Q35. An observer finds the angle of elevation of the top of the tower from a cas 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. Or, From a top of a building 100 m high the angle of depression of two objects.	e. Draw a neat diagram for it	5
as 30°. If the observer moves 20 m, towards the base of the tower, the a increase by 15°, find the height of the tower. Or, From a top of a building 100 m high the angle of depression of two objects observed to be 45° and 60°. Find the distance between the objects.		
From a top of a building 100 m high the angle of depression of two objects.		5

Section E		
Case study based questions are compul	sory.	
36. Case Study – 1		4
Seating Capacity: The Fox Theater creates a "theater in the round" who Shakespeare's plays. The first row has 80 seats, the second row has 88, on.	2	

(i) How many seats are in the 10th row?

(1)

(ii) How many seats are in the 25th row?

(1)

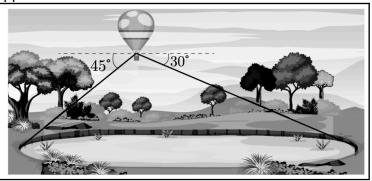

(iii) If there is room for 25 rows, how many chairs will be needed to set up the theatre?

(2)

Q37.

Case Study – 2

Width of a Lake : The angle of depression to one side of a lake, measured from a balloon 300 meter above the lake as shown in the accompanying figure, is 45° . The angle of depression to the opposite side of the lake is 30° .

(i) Find the width of the lake

(1)

(ii) Find the distance of the nearest side of the lake from the point lying just below the balloon on the lake.(1)

(iii) Find the ground distance of balloon from sides of lake. (2)

Q38.

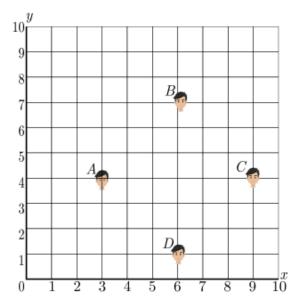

| 4

Case Study – 3

Morning assembly is an integral part of the school's schedule. Almost all the schools conduct morning assemblies which include prayers, information of latest happenings, inspiring thoughts, speech, national anthem, etc. A good school is always particular about their morning assembly schedule. Morning assembly is important for a child's development. It is essential to understand that morning assembly is not just about standing in long queues and singing prayers or national anthem, but it's something beyond just prayers. All the activities carried out in morning assembly by the

school staff and students have a great influence in every point of life. The positive effects of attending school assemblies can be felt throughout life. Have you noticed that in school assembly you always stand in row and column and this make a coordinate system. Suppose a school have 100 students and they all assemble in prayer in 10 rows as given

below

- (i) What is the distance between A and B?
- (ii) What is the distance between C and D?
- (iii) What is the distance between A and C?

- (1)
