

## FITTING THE HEAD

There are **2 pillows** inside the head; 1 at the forehead, and 1 at the top of the head. If you need to adjust the fit, both can be removed by velcro and stuffed further.

The head should fit as following:

## AFTER WEARING THE FURSVIT

- To prevent moisture buildup, **wipe the inside of the head after use and air it out using a desk fan.** Dryer sheets may be used to keep parts fresh inside.

- You plan to wear it multiple times in a day, you can lightly spray fur parts with an anti-bacterial spray (which has 1 part isopropyl alcohol and 1 part water) or an air freshening spray. It's recommended to do this **at most once per day**.
- If your head's hair is primarily wig, or very styled , it's recommended to place the head on a **standing head mannequin** when not in use.

## **CLEANING AND LONG TERM MAINTENANCE**

- Clean fursuit parts such as necks / handpaws /feetpaws / tails with [Folex](#) or laundry soap and water. **Avoid soaking foam pieces above 3 inches thick, as these will be harder to dry correctly.**
- Hand washing is recommended for fursuits, but machine washing is safe if the fursuit is placed in a laundry bag. **Do not dry clean the fursuit.**
- After the bodysuit is clean, you may place it into a washing machine on a spin cycle to get out most of the water. **Be sure to place in a laundry bag to minimize fur loss.**
- **Always air dry fursuit parts.**
- **Restyling the hair sometimes will be necessary.** You can use a comb, brush, or fur brush on the hair. For hair tips or bangs, you can use either watered down clear craft glue, hairspray, or a little hair gel (Like [Got 2B glued products](#).) **Use any product sparingly as it will build up.**

- If the hair becomes dirty or the product builds up too much, use a warm damp cloth and soap on the hair. Submerging the hair in warm soapy water may be necessary. (The fur on the face may get a little wet.)

## **PRECAUTIONS**

- Fursuits that are tight, or have a lot of small pieces may incur popped seams with extensive use. This is easily repairable with hand stitching.
- **Do not use fursuit spray or alcohol based cleaners directly on the eyes or areas that are airbrushed.** Please use a water based wipe for those areas.
- **Do not vacuum seal any fur pieces for longer than 24 hours.**
- **Creased fur** can be steamed with a hand steamer and fur brush / comb. **But be careful with applying heat to the fursuit, as burning fur is irreversible.**

**If you have any questions, please feel free to ask at any time.**

**Enjoy your new friend!**

## FURSUITING GUIDE

---

### PUTTING ON THE FURSUIT

- This is the recommended order for putting on an entire fursuit:  
**Plug fan into battery inside head → Insert padding into bodysuit → Attach tail to bodysuit → Put on bodysuit → Put on footpaws → Put on head → Put on handpaws → Cover the ankles and wrists with sleeves → Brush fur and hair**
- Wearing **full body [under armour](#)**, a head **balaclava** and/or **gloves** is recommended for heat and sweat absorption.
- The fan's battery can stay within the head on a loop at the top of the forehead.
- If you wear glasses, apply an anti-fog spray beforehand. (Like [Jaws spit anti-fog spray](#)) If this does help with fogging, contacts may be necessary.
