**Abstract:** Abstract is written in one paragraph explaining in brief about research objective, problems (by mentioning researched variables), research methodology, samples and sampling method, and results/findings.

**Keywords:** Social Entrepreneurship; Propensity; Coronavirus Outbreak.

**Abstrak:** Abstrak juga harus ditulis dalam Bahasa Indonesia.

**Kata Kunci:** Social Entrepreneurship; Propensity; Coronavirus Outbreak.

## INTRODUCTION

At every beginning of the paragraph has to be indented half-inch. Written in 1 space, 12pt Times New Roman, with no footage required., in A4 paper format, without page number. Sentences are arranged in passive form, **without mentioning the name of the author**, as well as other pronouns, such as "we" or "I". Numbers ranging from 1 to 10 as a measure of quantity, have to be typed in narrative form (words), except for numbers of Tables and Exhibits. For example six days (not 6 days).

The introduction contains a state-of-the-art explaining the existence of research problems that need to be answered through research activities. This section explains the theories within the scope of the research, existing phenomena, as well as the gap between the theories and the facts. This section also outlines the theories explaining the relationship among researched variables, relevant research results, and hypotheses. The relationships between current and previous research, as well as contributions to modern science, are also explained. Finally, **this section is closed with the statement of problems/research objectives, and the novelty of the research.**

## THEORETICAL REVIEW

This section begins by outlining grand theory as the fundamental theory covering the research, and next by outlining the theory of each variable applied. This theoretical review will comprise the relationship among variables, relevant research, research framework, and research hypothesis built.

All citations in Theoretical Review must-have reference sources (name, year), except the conclusion made by the author. All cited references have to be listed in Bibliography. Cited references are a minimum of 50 per cent from journals. Those journals were published a maximum of seven years old.

**Definition of social entrepreneurship.** The scholarly articles about SE began to be discovered easily after the 2000s. These were in line with the declaration of

Millennium Development Goals (MDGs) by the United Nation in 2000. There are some targets such as health, alleviating poverty, gender equality, environment, and HIV/AIDS to a global partnership. These targets can be mapped into three aspects namely: economic, social, and environmental, familiarly referred to as the triple bottom line. Efforts to synergize these aspects require the support of entrepreneurs or business owners so that their orientations are not limited to economic but balanced by social or ecological value. Thus, understanding SE is defined from the initial concept to its relevance to the goals of a global society.

Other conditions that have to be paid attention to by the author are topic and sub-topic are typed in bold letters (12pt Times New Roman) and have no numbers. The table has to be numbered and the title has to be placed in the centre position. Each table has to list its source below, except the source that comes from the author and/or statistical software analysis. Each table must contain a short explanation regarding the meaning of the numbers within.

**Table 1.** Table Information

<b>Column 1</b>	<b>Column 2</b>	<b>Column 3</b>	<b>Column 4</b>	<b>Column 5</b>
Cell 1.100	Cell 1.200	Cell 1.300	Cell 1.400	Cell 1.500
Cell 2.100	Cell 2.200	Cell 2.300	Cell 2.400	Cell 2.500
Cell 3.100	Cell 3.200	Cell 3.300	Cell 3.400	Cell 3.500
Cell 4.100	Cell 4.200	Cell 4.300	Cell 4.400	Cell 4.500

Further, **Table 1** summarizes the influence of each construct in the model of PSE. Firstly the SESE construct directly affected PSE by 9.160 per cent (**Don't use this symbol %**). The SESE represents self-efficacy in running social entrepreneurship. Generally, the majority of students own some obstacles related to self-confidence in creating a new venture. Indeed, students require high self-efficacy in starting a social enterprise. Cause of this reason, this behaviour makes a lower impact on the self-efficacy of the intention. Conversely, this is different from SEPS which represents social support for social ventures. The majority of students perceive that social support is more easily obtained from stakeholders or jointly with philanthropists. Therefore, the perceived

**Conditional Mean Equation,**

$$TOU_t = \alpha + \beta_1 AR(p) + \delta_1 MA(q) \dots\dots\dots (1)$$

**Conditional Variance Equation,**

$$\sigma_t^2 = c + \rho_1 e_{t-1}^2 + \gamma_1 \sigma_{t-1}^2 \dots\dots\dots (2)$$

These various tourist destinations are easily traced through the Kulon Progo tourist map as shown in **Figure 1**

## METHODS

This section outlines briefly the research subject and object, variable operationalization, population and samples, the sampling method, and the statistical test applied in the research.

## RESULTS

This section describes the research subject and object. The result of the statistical test comprises (1) Validity test, (2) Reliability test, (3) Stationer test, (4) Classical assumption test, (5) t-Test and F-Test, and (6) Coefficient of Determination test. The types of statistical tests are adjusted to the content of the research conducted.

## DISCUSSION

This section begins with the answer or settlement of the research hypothesis that has been built in the section literature review (only mentioning the effect or influence from independent to dependent variables, without providing statistical numbers). Then, the research implication has to be explained, connected to the description as well as contribution to related science. The results of other relevant research also need to be explained and compared in this section.

## CONCLUSION

This section outlines the answers to research problems and recommendations for the next research.

## REFERENCES

**All citations must be listed in this section and all sources in this section must be cited.** This means that the number of citations has to be the same as the number of references (not more or less). The article must contain at least seven sources of reference, and please ensure that the main journal is listed in the citation as well as in the bibliography/reference.

The bibliography is arranged in the authors' alphabetical order, without differentiation among books, journals, and online journals. Below are some examples of the writing of reference based on the source.

## ACKNOWLEDGEMENTS

This section is used to convey gratitude to those involved in research such as funders, sponsorships and mentors.
