Math Editor

Using the math editor

Access the math editor by selecting the + icon in the rich text editor. Select Math in the menu.

Submission

Drag and drop files here or click to add text

Use Option + F10 in the editor to access toolbar options. Use Esc to exit the editor.

Word count: 0

- Math
- Image from URL
- Media
- Content Market
- Cloud storage
- YouTube video

You can access many features in the math editor by selecting different tabs at the top.

Insert math formula

$$m = \frac{\Delta y}{\Delta x} = \frac{\square}{\square}$$

Cancel

Insert

Use your keyboard to enter numbers, letters, and symbols. Select the appropriate icon in the math editor to create complex formulas, such as creating a square root.

TIP: If you are using an option that changes the level of the text for your formula, such as subscript or a fraction, use the arrow keys on your keyboard to return to the default level. We recommend using the keyboard to navigate within a formula.

Insert math formula

The screenshot shows the Blackboard math editor interface. At the top, there is a toolbar with various mathematical symbols and functions. Below the toolbar is a large text area where the formula $m = \frac{\Delta y}{\Delta x} = \frac{y_A - y_B}{x_A - x_B}$ has been entered. To the right of the text area are dropdown menus for font and size, and a question mark icon.

Cancel

Insert

Some of the options for building formulas in the math editor include:

- Basic operations: addition, subtraction, multiplication, division, square roots, exponents, fractions
- Greek alphabet: alpha, beta, gamma, and others
- Matrix calculus
- Integrals, derivatives, and limits
- Trigonometric functions: sine (sin), cosine (cos), tangent (tan)
- Font styles and sizes

The [WIRIS website](#) provides detailed information about all the functions of the math editor.
