

HOW TO DOWNLOAD CDS

Downloading to a Computer

If the link doesn't work copy and paste it into your Browser.

It is best to download the WAV files which are better quality than the MP3 files (unless you don't have much room left on your computer harddrive).

When you click on the link, it opens a BLANK page and automatically downloads into your DOWNLOADS folder (unless you have set it up to download elsewhere).

If you click on the link and nothing happens, copy and paste the link into your browser. Links in email commonly don't work.

The WAV files are large files so could take quite a long time.
If your internet is not stable it might not make it through.

Chrome is better for downloading such large files... It seems to drop less.

Once the file is downloaded into your DOWNLOADS folder, click on the zip file to unzip it (on some computers, it unzips automatically. Then find the unzipped file.

You can normally just click on the unzipped file and it will play in your music player (Itunes, etc.). Or, you can create a new PLAYLIST in Itunes and drag the file into that window.

Best to do this if you have multiple songs that you want to play one after another.

Downloading to an Iphone

Itunes does not make it easy to get an MP3 into Itunes (unless you buy from Itunes)

WRITTEN INSTRUCTIONS:

Definitely use the MP3 link on your phone. WAV will work, but it is too big of a file for a phone.

Click on the link in your email inside your phone.

It will automatically download into your DOWNLOADS folder inside the FILES folder. Look for the FILES folder on your phone desktop. Open and look for DOWNLOADS.

Once the file is downloaded into your DOWNLOADS folder, click on the zip file to unzip it (on some phones, it unzips automatically. Then find the unzipped file (normally just below it).

Click on the unzipped file to play.

Again, iTunes does not make it easy to get an MP3 into iTunes (unless you buy from iTunes). See directions below on how to do it if you are adventurous.

Download MP3 File On Your Android Phone

The easiest method of downloading music onto your Android device is by connecting to your PC or Mac with a USB cable. However, as many people no longer own computers, this guide will show you how to download an MP3 file on your Android phone.
