### Abstract

Abstracts are written in English. The Distance between lines is one space, Times New Roman 12. The abstract, which typically ranges from 150 to 250 words, consists of a single paragraph that presents the main points of the research, including objectives, methods, research results, novelty, and implications. Abstract should be able to illustrate how the research done can contribute to the development of science in the field of physics and physics education.

**Keywords:** 3-5 words or phrases (words 1, words 2, etc.)

## INTRODUCTION

Contains background, rationale, and or research urgency. References (relevant literature or research) should be included in this section, in relation to the justification of research urgency, the emergence of research problems, alternative solutions, and the chosen solutions. The way of writing sources in the text needs to clearly indicate the name of the author and the citation of the source, in the form of the year of publication. For example, research results show that more than 70% of students are unable to recognize authentic problems (Mudinillah, 2024). The issues and objectives, as well as the usefulness of the research, are presented narratively in paragraphs; there is no need for special subtitles. Likewise, operational definitions, if deemed

necessary, are also written in a narrative form. The introduction is written in Times New Roman-11 upright, with one space. Each paragraph begins with a word that is indented into 5-6 digits, or about 1.2 cm from the left edge of each column.

### RESEARCH METHOD

Contains the type of research, time and place of research, targets/objectives, research subjects, procedures, instruments and data analysis techniques, as well as other matters related to the method of research. Targets/objectives, research subjects, procedures, data and instruments, data collection techniques, and data analysis techniques, as well as other matters related to the research method, can be organized into sub-chapters with sub-headings. Sub-subheadings do not need to be notated, but are written in lowercase with a capital letter, Times New Roman-11 bold, left aligned. As an example, see below.

### RESULTS AND DISCUSSION

Research results are presented in the form of graphs, tables, or descriptive text. Analysis and interpretation of these results is necessary before they are discussed.

The table is written in the middle or at the end of each research result/gain description text. If the width of the Table is not enough to be written on half a page, it can be written on a full page. Table titles are written from the left, and all words begin with a capital letter, except conjunctions. Suppose more than one line is written in a single space (at least 12). For example, this is illustrated in Table 1. Following.

Table 1. Students' ability scores to do ... on learning ...

No.	Assessment Aspect	Score
Mean		

The results are presented in the form of images or data that consists of images/schemes/graphs/diagrams/the like. The presentation also follows the existing rules; the title or image name is placed below the image, from the left, and spaced one space (at least 12) from the image. If there is more than one line, the lines are single-spaced or at least 12-point. For example, this is illustrated in Figure 1 below.

Figure 1. Growth curve and chitinase activity ...

The discussion focuses on connecting data and analysis results with the problem or research objectives and the broader theoretical context. Could this discussion be the answer to the question of why these facts were found in the data?

A written discussion is attached to the data discussed. The debate is inseparable from the data discussed, as well as conveying the *novelty in this research and its implications*.

## CONCLUSION

Conclusions can be generalised findings based on research problems, and can also be presented in the form of recommendations for the next step.

## ACKNOWLEDGMENTS

I want to thank you for funding this research. This work was supported by the Potential Academic Staff (PAS) Grant, provided by the Research Management Centre, UTM (PY/2017/00149)....

## REFERENCES

Written in the style of an educational environment, as stated in the guidelines for this journal (which ratified APA VII Edition).

Written in single space (or at least 11pt), each bibliography is spaced one space. Examples of how to write references in the bibliography are provided below.

### a. Example if coming from a textbook:

Gronlund, N.E. & Linn, R.L. (1990). *Measurement and evaluation in teaching*. (6<sup>th</sup>ed.). Macmillan.

### b. From the thesis/thesis/dissertation

Hollander, M. M. (2017). *Resistance to authority: Methodological innovations and new lessons from the Milgram experiment* (Publikasi No. 10289373) [Dissertation, University of Wisconsin-Madison]. ProQuest Dissertations and Theses Global.

Slamet Suyanto (2009). *Keberhasilan sekolah dalam ujian nasional ditinjau dari organisasi belajar*. [Disertasi belum dipublikasikan]. Universitas Negeri Jakarta.

### c. From the journal

Hamidi, S. A., Hashimi, F. U., & Rahmati, A. (2024). *Integrating Artificial Intelligence in IoT Systems: A Systematic Review of Recent Advances and Applications*. *Journal of Computer Science Advancements*, 2(6), 307–322. <https://doi.org/10.70177/jsca.v2i6.1420>

### d. From a collection of research abstracts or proceedings

Purwianingsih, W., Hidayat, R. Y., & Rahmat, A. (2019). *Increasing anthraquinone compounds in the callus leaf of *Morinda citrifolia* (L.) by the elicitation method using the chitosan shell of shrimps (*Penaeus monodon*)*. *Journal of Physics: Conference Series*, 1280, 022001. <https://doi.org/10.1088/1742-6596/1280/2/022001>
