

Privacy Policy — Carrom Box

Effective date: 17 August 2026 Last updated: 17 August 2026

App: Carrom Box (Carrom Box – Offline 3D Game) Package name: `com.mustfa.carrom` Developer: Mustfa Saifullah Contact: saifullah4141@gmail.com

1. Summary

Carrom Box is an offline game. It contains four games — Carrom, Bubble Shooter, Heli Rescue and Sudoku.

- We do not ask you to create an account or sign in.
- We do not run any server. Your game progress never leaves your device except through Android's own backup feature (see section 7).
- We do not use any analytics, tracking or crash-reporting service.
- We do show ads through Google AdMob, and AdMob collects data about your device in order to serve them. This is the main way information leaves your phone, and section 4 explains it in full.
- We do offer optional in-app purchases, which are processed entirely by Google Play. We never see your payment details.

2. Information you give us directly

The app lets you enter two optional things:

What	Why	Where it goes
Player name	Shown on the scoreboard during a match	Stored on your device only
Avatar choice	Shown on your profile	Stored on your device only

Both are optional, both are free text or a picture you pick from a built-in list, and neither is transmitted anywhere. You can change or clear them at any time in the app's Profile screen.

Please do not enter your real full name, phone number, email address or any other personal detail as your player name. It is only a label for a local scoreboard.

3. Information stored on your device

The app saves the following to your device's private storage (Android `SharedPreferences`), so your progress survives closing the app:

- Coin and diamond balance
- Items you have unlocked and equipped (boards, carrom men, strikers, queens, helicopter skins, bubble sets, sudoku themes)
- Best scores, matches played, matches won, achievements
- Sudoku best times per difficulty, and your current level in Heli Rescue and Carrom practise
- Settings: sound on/off, music on/off, vibration, sound pack, music track, volumes, striker power, colour theme and language
- Daily reward and spin-wheel timers
- Your player name and avatar choice

This data is stored only on your device. It is not uploaded to us, and we have no way of reading it. Deleting the app deletes all of it (see section 9).

4. Advertising (Google AdMob)

The app is supported by advertising. Ads are served by Google AdMob, and are shown as banners, occasional full-screen ads between rounds, and optional "watch an ad for a reward" videos that you choose to start.

To serve and measure ads, Google collects and processes information such as:

- Your device's advertising identifier (Advertising ID)
- IP address and derived approximate location (typically country/city level)
- Device information — model, operating system version, language, screen size
- Ad interaction data — which ads were shown, viewed, or clicked
- App usage signals related to ad delivery and fraud prevention

We do not receive this information in an identifiable form. We only see aggregate earnings reports in our AdMob dashboard.

Google acts as an independent controller of this data. Please read:

- Google Privacy Policy — <https://policies.google.com/privacy>
- How Google uses information from sites or apps that use our services — <https://policies.google.com/technologies/partner-sites>
- AdMob / Google Ads partner list — <https://support.google.com/admob/answer/9012903>

Your choices about ads

- Reset or delete your Advertising ID: Android Settings → Privacy → Ads → *Reset advertising ID* or *Delete advertising ID*.
- Opt out of personalised ads: the same Ads settings screen has an option to turn off ad personalisation. You will still see ads, but they will be non-personalised.
- EEA, UK and Switzerland: when you first launch the app, we show a consent form provided by Google's User Messaging Platform, as required by Google's EU User Consent Policy. Nothing is requested from AdMob until you have made your choice. You can change your choice later from within the app's consent options, or by clearing the app's data.

Rewarded ads are always optional. Declining one never blocks progress; it only means you do not receive that particular optional bonus.

5. In-app purchases (Google Play Billing)

The app offers optional purchases of coin packs (`coins_tier1` to `coins_tier5`). These are consumable virtual items.

- All payments are processed by Google Play. We never receive, see or store your card number, bank details, billing address, or Google account password.
- Google provides us with a purchase token and order identifier so the app can grant the coins you bought and prevent the same purchase being credited twice.
- Google's handling of your payment data is governed by the Google Play Terms of Service and the Google Privacy Policy.

About virtual currency

Coins and diamonds are a virtual in-game currency. They:

- have no real-world monetary value;
- cannot be exchanged, redeemed or cashed out for real money, goods or services outside the game;
- are non-transferable between devices, accounts or players;
- are non-refundable by us – refund requests are handled by Google Play under its refund policy;
- may be lost permanently if you uninstall the app or clear its data.

Paying money never gives a gameplay advantage. Purchases only unlock cosmetic designs and convenience items. The physics, the computer opponent and the rules are identical for every player.

6. Permissions the app requests

The app requests only two permissions, both of which exist solely to load ads:

Permission	Why it is needed
<code>INTERNET</code>	To download advertisements and contact Google Play Billing
<code>ACCESS_NETWORK_STATE</code>	To check whether a network is available before requesting an ad

The app does not request access to your camera, microphone, contacts, photos, files, precise location, calendar, phone, SMS, or any other sensitive permission. The four games themselves work fully offline.

7. Android backup

The app allows Android's standard backup feature to include its data. If you have Android Backup / Google One backup enabled on your device, your game data (settings, progress, balances) may be copied to your Google account's backup so it can be restored to a new device.

This backup is controlled by Google and your device settings, not by us. You can disable it in Android Settings → Google → Backup, or by turning off backup for this app in your device's backup settings.

8. Children's privacy

This app is not directed at children under the age of 13 (or the equivalent minimum age in your country).

We do not knowingly collect personal information from children. Because the app displays advertising that may use an Advertising ID, we ask that parents and guardians supervise the use of this app by minors, and consider using the ad settings described in section 4.

If you believe a child has provided personal information through this app, please contact us at saifullah4141@gmail.com and we will help you remove it.

9. Data retention and deletion

Because we run no server, we hold nothing to delete on our side.

To delete everything the app has stored:

- Uninstall the app — this removes all local game data; or
- Clear the app's data — Android Settings → Apps → Carrom Box → Storage → *Clear data*.

Either action permanently erases your coins, diamonds, unlocked items, scores, statistics, settings, player name and avatar. This cannot be undone, and purchased coins cannot be restored.

To remove data held by Google in connection with advertising, use the Advertising ID controls described in section 4 and Google's own privacy controls at <https://myaccount.google.com/data-and-privacy>.

10. Data security

Game data is stored in the app's private storage area, which on a normal (non-rooted) Android device is not readable by other apps.

Please be aware that no method of electronic storage is completely secure, and that on a rooted or modified device, local game data may be readable or editable by other software. Since we store no personal information beyond an optional player name and avatar choice, the practical risk to your privacy is low.

11. International data transfers

We do not transfer any data ourselves. Google may process advertising and purchase data on servers located outside your country, including in the United States. Google's transfer safeguards are described in its privacy policy at <https://policies.google.com/privacy>.

12. Your rights

Depending on where you live, you may have rights over your personal data, including the right to access, correct, delete, restrict or object to its processing, and the right to withdraw consent.

Because we do not collect or hold personal data, most of these rights are exercised directly against Google as the party that processes advertising data. Please use Google's privacy controls at <https://myaccount.google.com/data-and-privacy>, or contact Google directly.

For anything relating to this app specifically, contact us at saifullah4141@gmail.com and we will respond as promptly as we can.

California residents: we do not sell or share personal information as those terms are defined under the CCPA/CPRA.

13. Third-party services used

For transparency, this is the complete list of third-party components in the app that can transmit data:

Service	Purpose	Privacy policy
Google AdMob (Play Services Ads)	Showing ads	https://policies.google.com/privacy
Google User Messaging Platform	GDPR/consent form	https://policies.google.com/privacy
Google Play Billing	In-app purchases	https://policies.google.com/privacy

The app contains no analytics SDK, no crash-reporting SDK, no social network SDK, and no attribution or advertising-measurement SDK beyond AdMob's own.

14. Changes to this policy

We may update this policy when the app changes — for example if a new feature requires a new permission. When we do, we will change the "Last updated" date at the top, and for significant changes we will make the updated policy available in the app and on the Google Play listing before the change takes effect.

Continuing to use the app after an update means you accept the revised policy.

15. Contact

Questions, concerns or requests about this policy:
