

New England Botanical Society

Graduate Student Research Award

Field Visit Sites and Permissions

Field Research and Collecting Information

If the proposal includes field work and collecting in New England, the applicant must provide information on proposed localities (i.e., based on known extant occurrences or herbarium specimens).

State	Locality	Known Extant Pop. (y/n)	Herbarium record (y/n)	Public land (y/n)	Private land (y/n)	State listing *

*For state listing, indicate whether species is endangered (E), threatened (T), watch-listed (W), or secure (N/A). For research on any state-listed species, provide a letter of approval from the state botanist or natural heritage department.

Permissions

Any collecting on private land depends on landowner permission. Collecting on public lands requires agency permits or permissions. Roadside right-of-ways and navigable waterways do not require permission, unless private land is crossed to reach them.

Please list what organizations, agencies, and individuals have been contacted to request permission to collect or conduct research on their property. Indicate whether permission has been obtained or is pending. Supporting documents and evidence of permission may be attached and submitted with this form.

Organization, Agency, or Individual	Permission received	Permission Pending
