Privacy Policy

TuitioniFy | Effective date: 22 October 2026

1. About TuitioniFy

TuitioniFy is a tuition class management application designed to help tutors manage students, batches, fees, receipts, attendance, notices and reminders. This policy explains how information is handled when you use the app.

2. Information entered into the app

Users may enter student and parent names, contact numbers, batch details, attendance records, fee and payment information, and messages or notices. This information is provided and managed by the user.

3. Local storage

According to the app developer, tuition management records are stored locally on the user's device, not on a TuitioniFy-operated online server. Users are responsible for securing their device and retaining backup copies of their data.

4. How information is used

The app uses entered information to display student records, calculate and track fees and dues, create receipts and statements, maintain attendance, and prepare reminders and notices.

5. Sharing through other apps

When a user chooses to send a notice, reminder, receipt, or backup through WhatsApp, SMS, or another external application, the selected information is transferred to that service through the device's sharing or messaging features. The third-party service's privacy practices then apply. The user controls these sharing actions.

6. Backups and restoration

The app may allow users to export local backup files, save or share them using device storage or other apps, and import backup files to restore records. Backups stored or shared outside TuitioniFy are subject to the security and privacy practices of the chosen storage or messaging provider.

7. Permissions

Depending on the features used and Android version, the app may request access to device functions needed for notifications, files, or communication actions. Users can review available permissions in Android settings.

8. Children's information

The app is intended for use by tutors or tuition administrators, not directly by children. Tutors should only enter student information that they are authorized to manage, and should protect student and parent details appropriately.

9. Data retention and deletion

Locally stored records remain on the device until the user edits or deletes them, clears the app's data, uninstalls the app, or uses a reset function, as applicable. Exported backup files and copies shared with third-party services must be managed or deleted separately by the user.

10. Security

The app relies in part on device-level protections. No method of storage or transmission is completely secure. Users should use device screen locks, keep their device updated, and avoid sharing backup files with unauthorized people.

11. Third-party services and purchases

External messaging, file-storage, and payment or billing services, if used, may process information under their own privacy policies. Any third-party SDKs, analytics, crash-reporting, or billing integrations included in a published version must be separately assessed and accurately disclosed in the Google Play Data safety form and this policy.

12. Changes to this policy

We may update this Privacy Policy if the app's features or data-handling practices change. The updated version will show a revised effective date.

13. Contact
