Saving The Forest

Hello. We made a forest weaving and we want to show how we made our weaving . First we used natural materials. Such as Garlic mustard and Bittersweet. Also we used rope, yarn, string, old t-shirts, shoelaces, and plastic bags in our weaving. Some materials we use are often thrown away and create pollution, so we used it in our loom for good use and brought awareness to pollution. The garlic mustard and bittersweet represented the invasive species in our forest in our weaving. The plastic bags and other items represented the trash in the earth's environment. We got rid of garlic mustard because it is invasive and plants many seeds. And we got rid of the bittersweet because it strangles trees and plants. This project has helped us to be creative and make cool designs. We used bright colored t-shirts on our loom to show our bright focal point. For example, in the project we used a shoelace to make a cool back and forth design. We also used the invasive species to stick out through the weaving and looked nice.
