

Notice (required): 2.4.0 Update Additional and Notice Information

Hello, this is Team Tapas

We are announcing that there is a missing part in the upcoming notice of version 2.4.0 currently being inspected by the store.

With this 2.4.0 update, the achievement of 'Use a voucher immediately after cooking' has been changed and the overall achievement requirement has been increased.

This achievement was added due to the fact that the price of the voucher was immediately priced before cooking, but this update made the decision as the purchase price of the resource dropped significantly and the need for the achievement disappeared.

Achievement changes

1) Existing 'Use a voucher immediately after cooking' achievement is changed to 'Use special tickets', and the achievement requirement is increased.

- Existing: 1, 3, 5 (repeat)
- Changes: 1, 5, 10, 25, 50, 75, 100 (repeat)

2) The achievement level previously achieved will also be lowered according to the changed demand.

- (Example) If 50 dishes were used immediately
- Existing level: Level 12
- Change Level: Level 5

* Jewelry that has already been earned in the version of 2.3.0 or earlier with the 'Use a voucher immediately after cooking' achievement will not be recovered.

Instead of lowering the efficiency of the achievement, update rewards are added as follows to prevent the situation from causing damage.

Rewards for achievement changes

In the 2.4.0 update, the following rewards are automatically acquired depending on the amount of instant sales and additional stamina.

- 0.17 gems for each additional stamina you have (calculated as rounding)
- 0.85 jewels per 1 instant voucher of cooking you have (counted as round up)
- (Example) If you have 1001 extra stamina and 1001 cooking instant sales rights, you will get 1022 gems.

* Immediate sales rights of additional stamina and dishes are retained. (The instant sales ticket is a special ticket, and the name and function are changed.)

Below is a note regarding the above changes.

1) If you haven't received achievement rewards in versions below 2.3.0, please collect achievement rewards in advance.

- When updating 2.4.0, you may not be able to obtain some rewards due to the increase in the amount of achievement achievement, so please update after receiving achievement rewards in advance.

2) In versions below 2.3.0, it is not recommended to update after staking out additional stamina and cooking immediately to reward achievements.

- As a result of internal testing, it was found that updating the resource after consuming it in almost all situations was not much different from updating without consuming the resource.

3) It is not recommended to purchase additional stamina or additional instant sales coupons as a gem to earn achievements or update rewards in versions below 2.3.0.

- Internal testing has shown that purchasing the resource in versions 2.3.0 and lower in almost all situations is a significant loss.

We sincerely apologize for any confusion due to late notice regarding the above matters. If you have any related inquiries, please send them through a note or email (support@teamtapas.com) or we will answer them individually or collect your inquiries for further notice. I will guide you.

In addition, we will notify you in addition to the patch notes including the above as soon as the inspection of both stores of version 2.4.0 is completed.

Thank You
