

S926-X K Network settings

The Zidoo S928X-K product network settings include function options such as Wi-Fi, Ethernet, Bluetooth, Samba server, Portable hotspot, etc.

I. Wi-Fi

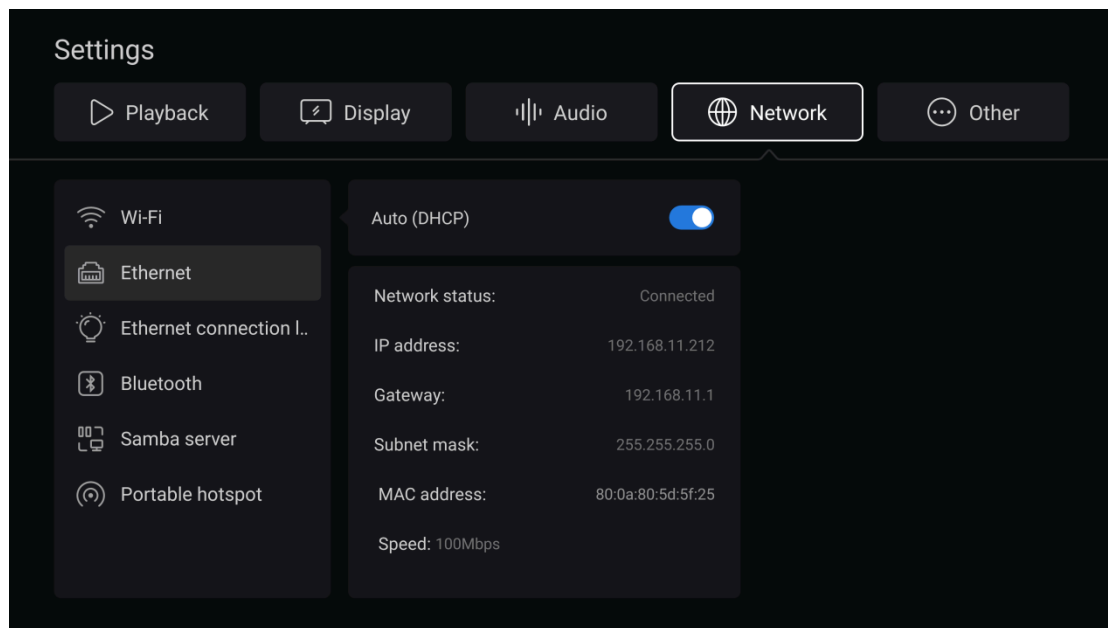

Enter the player Wi-Fi option will automatically search for nearby Wi-Fi, when searching for your router Wi-Fi SSID, you can enter the password to connect. Wi-Fi support 2.4G + 5G Wi-Fi 6, click on the add option. You can manually add Wi-Fi, support for the hidden Wi-Fi SSID.

Note:

*For products with external antenna, please install the antenna first before using this function.

*Wireless and wired networks cannot be used at the same time. Please remove the network cable before using the wireless network.

II. Ethernet

Use above Category 5e 8-core Ethernet cable, one end connects to the network port at the end of the player, and another end connects to the LAN port of the router or switch. When this option can get the IP automatically, it means the connection is successful.

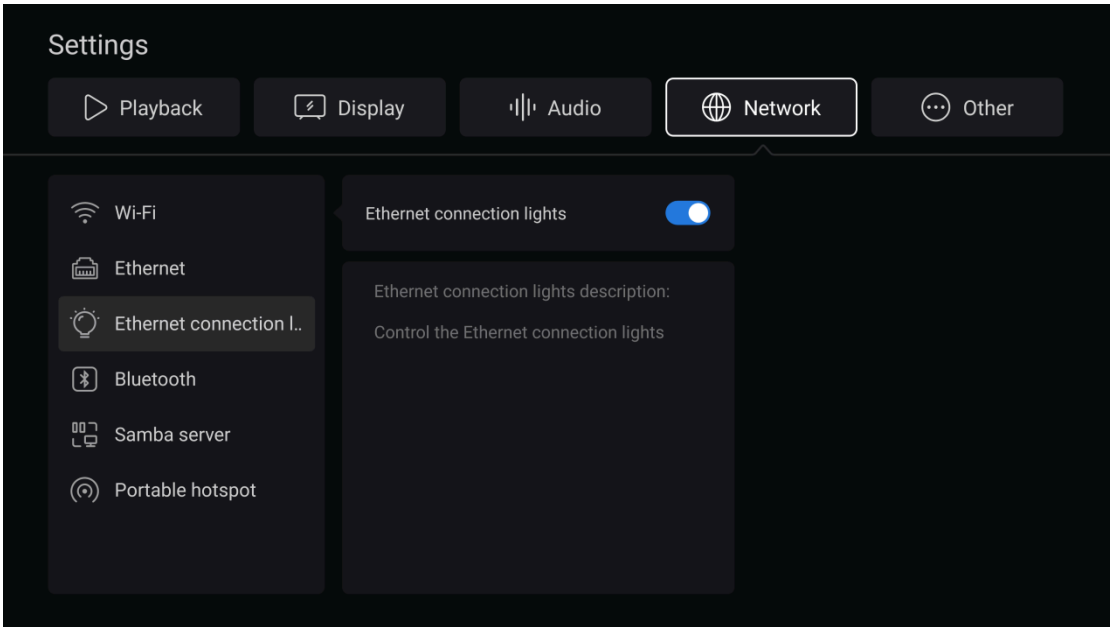

- **Turn on the Auto (DHCP):** player will automatically get an IP to connect to the network
- **Turn off the Auto (DHCP):** Static IP addresses can be manually configured

Note:

*Wireless and wired networks cannot be used at the same time, please disconnect the WiFi connection before using the wired network.

*After the player is able to obtain an IP automatically, then manually configure a static IP.

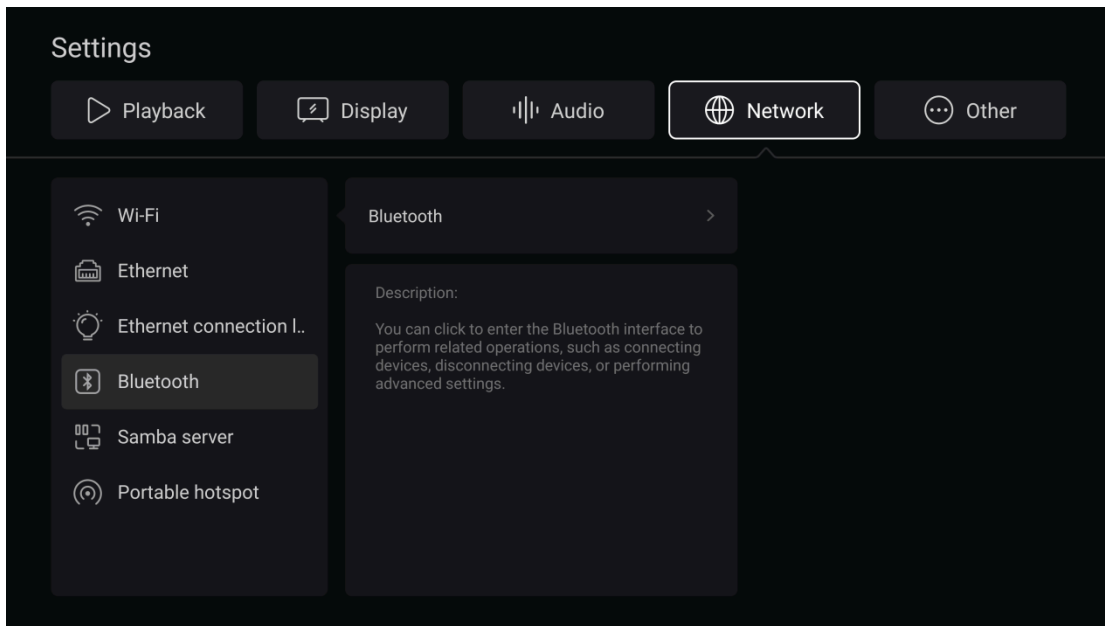

III. Ethernet connection lights

This option turns on or off the wired network port indicator at the end of the player

Player Status	Port Light Color	Network Port Status
on/off	orange	GE
	green	FE

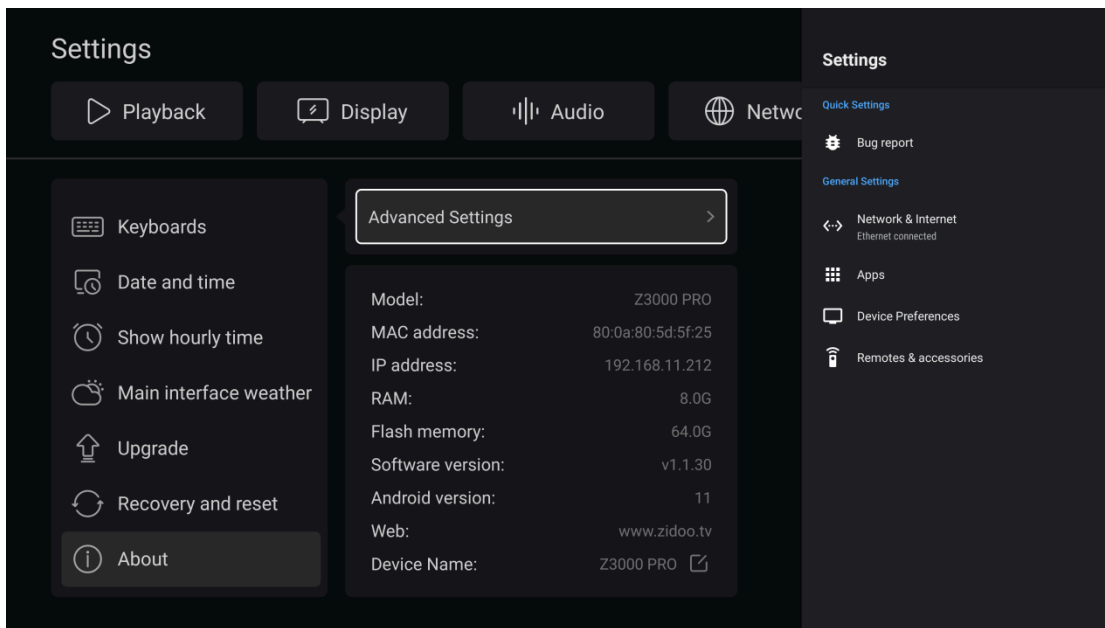

IV. Bluetooth

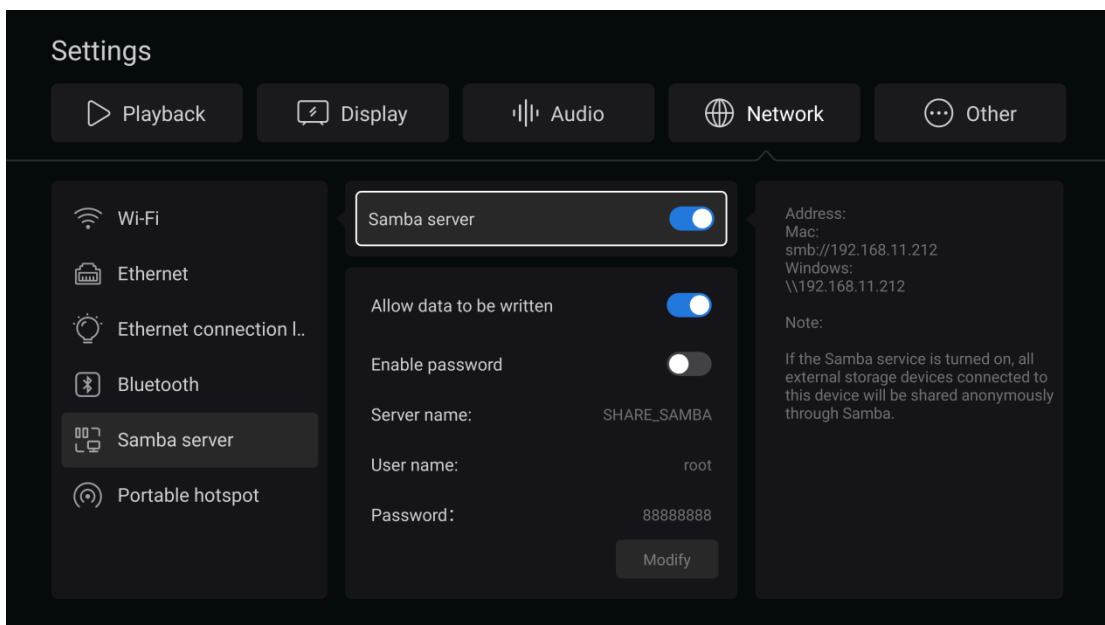

This function can connect Bluetooth remote control, Bluetooth speakers, Bluetooth headphones, Bluetooth keyboard, Bluetooth mouse, etc.

For Bluetooth devices connection, disconnection, advanced settings, etc. Please enter to Other Settings - About - Advanced Settings - Remotes & accessories for configuration.

Note: For products with external antenna, please install the antenna first before using this function.

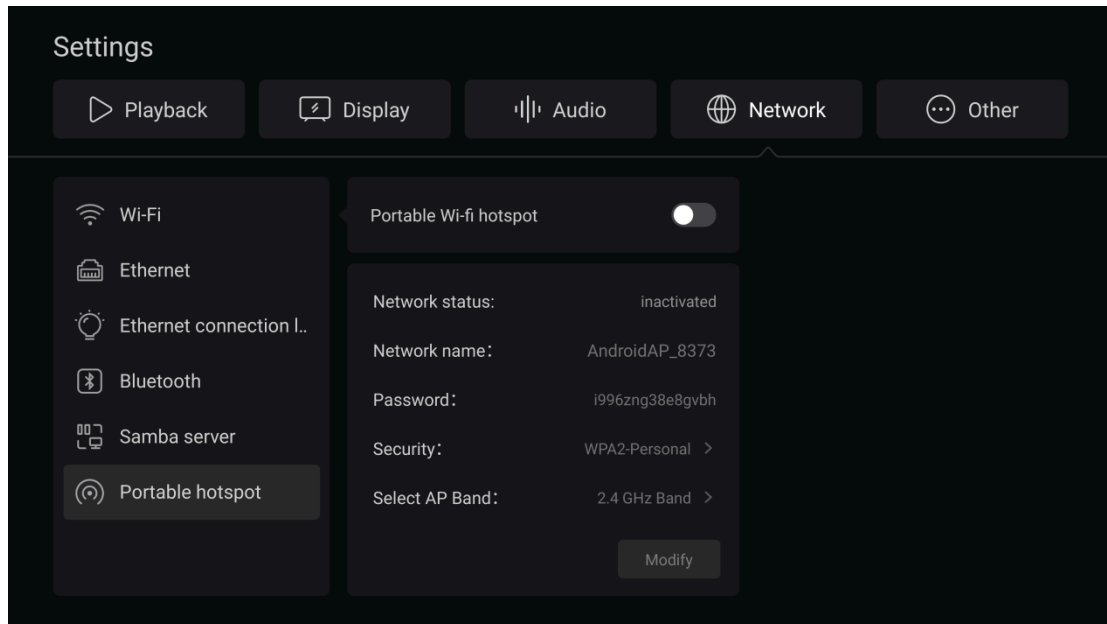

V. Samba server

With this function on, cell phones and PCs can access the player's external hard disk via network SMB protocol for file transfer and management, turning the player into a simple NAS.

Reference Tutorial: [Synology NAS SMB and NFS Sharing](#)

VI. Portable hotspot

Turning on the Portable Wi-fi hotspot function allows Zidoo to turn into an AP (Wireless Access Point) and share WiFi for cell phones as well as other devices. Click Modify at the bottom to customize the network name, password, switch security and select AP band.

Note: For products with external antenna, please install the antenna first before using this function.

ZIDOO will update the firmware from time to time, therefore, the operating instructions in this tutorial will be updated too, there may be a slight discrepancy with the actual use of the product, please refer to the actual situation.
