

There are social, medical and technical problems associated with the use of mobile phones.

What forms do they take?

Do you agree that the problems outweigh the benefits of mobile phones?

The cell phone is one of the best inventions in the field of communication. Every day, technological advancements are making possible newer and better models of the same. It has some social, medical, and technical concerns. However, its advantages outweigh the disadvantages.

To commence with, social problems are of the form of loss of manners and misuse. To start with, we can see people talking loudly on their mobile phones at colleges, hospitals, at a meeting or even while driving. Such manner deficient behavior creates difficulty for others and for the users also. Moreover, people take pictures or record others' movements without their consent. This leads to the misuse of those photographs and can lead to crime.

Next, there are medical issues also. Mobiles generate strong electro-magnetic fields and a constant exposure is dangerous to our body. It can lead to brain tumors, heart troubles or even impotence in males. Furthermore, it has some technical concerns also. Many people do not know how to time minor technical applications. In addition, some people mishandle the parts of the instrument. For example, mobiles run on a lithium battery that can explode in direct sunlight and in water, which can be life-threatening.

Thus, mobiles do have social, medical, and technical issues. However, I think with proper handling, counseling, and stricter legislation, all the issues can be taken care of. What is more, it is a boon for communication, data storage, Internet accessibility, and so on. Thus, they are gaining in usage and popularity.

Summing up, considering all the aspects, I assert that the difficult issues related to mobile phones are far less than the benefits associated with their usage.
