Knee pain can affect people of any age. Some knee pains are serious while others are mild and can be taken care of with self-care measures. Often people with more active lifestyle are associated with knee pains. But that does not mean that people who have sedentary lifestyle are guaranteed to have no knee problem. People who spent lot of their time sitting can also develop knee problem. While bad postures can also contribute in knee pain if we stay at that position for prolonged periods.

Sedentary jobs can often lead to various types of pain including knee pain. The reasons could include too much inactivity. When we have to sit for hours in a seat we might also get into bad postures that can affect our knees. Sometimes the height of our table and office furniture is also not meant to be optimal for our body structure that can put extra pressure on the knees. Sitting on a low chair, bending the knees for prolonged periods, all this can contribute in having knee pain at office. Will standing desk help back pain – [Go Here](#).

Can A Standing Desk Be The Solution If your knee problem is due to inactivity or limited movement of the body, a standing desk might help to reduce your knee pain. Studies have suggested various benefits of standing desk, most importantly; it helps to avoid sedentary lifestyle. Knee pain is not the only problems associated with inactivity but there are more serious health risks which are associated with sedentary life style. This includes heart disease, obesity, risk of certain types of cancer, etc. Check out Upwrite by Updesk review – [Website](#).

Height adjustable standing desk can be used while sitting and standing; [See Here](#). It can be switched to different heights, manually or through electric means. Switching to sitting and standing throughout your day at office can help you avoid staying at a position for prolonged periods. While standing also encourages body movement, and you can even stretch your legs and do exercise that can help with knee pain.
