On policy and the ethics of our political economy, viz. social morality, mixed economies, class war/income inequality, etc.:

- Self-taxation (uses a decentralized, voluntary/self-taxation, to use Keynesian stimulus to promote intermediate and long-term GDP/GDP per capita growth, viz. economy of basic/fundamental needs, viz. consumer services, viz. effects of compound interest on wealth and capital, accumulated viz. investment deficits in overall functionalism of the market's solutions of existing issues and problems facing, etc.).
- Uses a narrow and broad algorithm subset to create a model of mixed economies both locally, regionally, and globally, in order to approximate a level of analysis approaching a quantitative reality viz. basic human needs/wants, viz. the political and socioeconomic status of the individual, viz. the system and its constraints/the algorithm from which an inverse adjustment to investment returns is made to account for other investors with little or no accumulated wealth, poor credit rating, bad credit history, etc.:

Other models:

1. Countries and nation-states, viz. domestic and international governments (which borrow from the private sector at a rate of up to 10% of $25tn/year).
2. Taxes (income and corporate taxes, sales tax, capital gains taxes, taxed gifts, and inheritance, etc.).
3. Charity/donations (Kickstarter, GoFundMe, Facebook, etc., as well as up to 1.5mn nonprofit organizations in the US, and 10mn worldwide).
4. PayPal, Zelle, CashApp, Venmo, etc. (about 1,300 companies that process Visa payments online).
5. Micro-lending/micro-loans (as well as 140 SBA lenders in the US serving 49 states that offer small business loans).
6. Payday loans (about 23,000 in the US); auto title loans (about 8,000 in the US).
7. Banks (with about 4,236 in the US with 354,600 loan officers and 466,900 securities, commodities, and financial services sales agents:
   a. consumer loans (car loans, mortgages, etc.).
   b. small business loans, etc.
   c. financial products (annuities, etc.).
8. Wealth management companies (about 92,717 in the US), financial advisors (about 330,300 in the US), investment brokers (about 4,058 in the US and 291,880 working in the space of financial and investment analysis that have not had these insights into perverse incentives in a necessary and sufficient (systematic level of explanatory power for what's being missed), etc.

Advantages:

- Leverages current mixed economies and the internet of things, credit agencies (credit ratings/history, social credit, etc.).
- Leverages up to 400K+ variables viz. YCharts, et al.

- Leverages venture capital start-up models like YCombinator, etc.

Mission statement:

Quantify, Inc.: leverages independent contractors to set up C corporations, and LLCs, for the purpose of doing research and development into Quantify, Inc., lists of patents/copyrights, viz. royalties and payments, etc.
